After reading the Brazosport Facts paper online I had to reply. Your office is requesting comments for insight. Here goes... I had worked in the brazosport area for afew years doing environmental monitoring at Dow, Testing process equipment for emissions, inspections on RCRA lines through out Dow Freeport, then after becoming a master tech for my firm, I became a manager of change. Then ended my tour doing projects at Dow. I have to ask, HOW CAN I SPEND TWO YEARS DOING WHAT I DID, SEEN WHAT I SEEN, AND NOONE ELS HAS. I remember one day in early spring 04, I was working aproject, and was looking for a tower that had been monitored the month before, come to find out the tower had been gone for 3+years! Now tell me how it was monitored the month before? EAI who does the monitoring at dow hushed me up. At the end of each year Dow has over 500.000 componets which must be monitored right! Not all were never found, and EAI swept it under the mat. You may have a 3"valve beside the buc-ees store on hwy 332, do you think it was monitored? WELL NOPE! If your office really wants to help, here is how you can start. During the last three weeks of monitoring for 4Q08 at Dow, Send ateam to follow all the 10 or so tech's while they monitor all the site DTM'S and ALL annuals. And when you do you will do Three things. One: you will wonder how in hell they ever got monitored in the first place thats if they are even found, Two; Lord we have LEAKS, And last you will see the people of brazosport are in danager.

Thank You
