

H-GAC REGIONAL THOROUGHFARE PLAN

Background

Starting in 2009, H-GAC staff set out to create a process for data improvements and acquisition for the Regional Thoroughfare Plan (RTP) update. Working with representatives from the eight (8) counties that comprise metropolitan transportation planning region, H-GAC staff developed workshops to improve collaboration, collect data, and establish a framework for future development of the Regional Thoroughfare Plan.

Current Situation

H-GAC staff is in the final process of quality assurance quality control of the GIS dataset. Staff will go back out to those involved in the planning process and provide a copy of the dataset along with a poster of the updated regional map. This should be a useful tool to establish the road networks for the RTP revise for 2040.
