

H-GAC'S Regional Urban Forestry Summit

TREE INVENTORIES

Estimating the Value and Importance Of Community Trees and Urban Forests

Charles Burditt
Urban and Community Forest Planner; *BURDITT*

TREE INVENTORIES

The **Foundation** of Urban Forest Management

Urban Forest (Schafer and Moeller)

“.....that portion of the urban ecosystem that consists of **forest vegetation, water, soil, and wildlife** in densely populated areas and adjacent lands.”

Urban Forest Includes

- Tree Lined Streets

- River Banks and Flood Control Canals

Urban Forest Includes

- Golf Courses and Recreation Areas

- Cemeteries

Urban Forest Management

- The establishment and care of the urban resource.
- The **process** through which urban forests are manipulated **to provide multiple use and long term benefits to urban society.**

Urban Forestry Means Planning....

Urban forestry means the **planning, establishment, protection and management of trees** and associated plants, individually, in small groups, or under forest conditions **within cities, their suburbs, and towns.**

Urban Foresters must have knowledge of the **physiological needs** of the tree and tree systems.

Forest violence

Urban Foresters

- Must have **experience with those urban activities that will impact trees.**
- Must **understand the sociological importance of trees** and how they are managed within a municipal setting.
- Must **communicate with people** and also with **“people” in power**

An Urban Forester Must COMMUNICATE, eh Mr. Hat?

Who Might Practice as Urban Foresters?

- Urban Foresters
- Foresters
- Horticulturalists
- Landscape Architects
- Environmental Sciences
- Geographers (GIS & Remote Sensing)

Why Conduct an Inventory?

- Management of any resource begins with an inventory of that resource.
- Urban Forest Management is no exception.
- Most Communities are **managing a valuable urban asset without knowing what they have** or what they are responsible for.

How Does Your Community Measure Up?

- Houston – 30 % Canopy
- San Antonio – 20 % Canopy
- Garland – 11 % Canopy
- New Orleans – 24 % Canopy
- San Diego – 7 % Canopy
- Washington, DC – 21 % Canopy
- Buffalo, NY – 12 % Canopy

Four Methods of Urban Tree Inventories

- Comprehensive (100 percent)
- Partial Sample or “Cruise”
- Remote Sensing
- Windshield Sample

Inventory Method Depends on the Purpose

- **Budget information** to support a department's request for funding?
- Provide a **baseline** of information **for** extensive **maintenance operations**?
- Is it a **snapshot of the community** desired by a non-profit or **public relations** effort by the city?
- Permanent or transitory?
- Single issue or task?

What Are Objectives of the Inventory

- Street Trees – Municipal Ownership
- Total Community Canopy
- Parkland and Natural Areas
- Special Projects – Task Oriented
- Disaster Losses
- Legal Matters (Actual and Ecological Damages)

Park and Playground Safety

Conventional Uses of a Tree Inventory

MAINTENANCE TASKS

- Plan
- Schedule
- Monitor

MANAGEMENT DECISIONS

- Develop Budgets
- Make Changes

How To Get It Done?

Requires:

- Coordinated planning
- The support of political, civic, and business leaders
- A “champion” in city government
- An understanding by those in the professional community that it is important

Backpack GPS

Rugged Field Pen Based Computer

What Assets Will Be Used?

- Satellite Imagery
- Aerial Photography
- Geographic Information Systems (GIS)
- Statistical Analysis
- Individual Tree Site Inspection
- Windshield Inspection
- Hardware and Software

Comprehensive - 100 %

- Small communities and large
- Time constraints are not problematic
- Adequate budget for the project
- Data will be used for actual planning and maintenance operations
- Data will be updated
- Used in progressive communities with proactive management approach

Sample Inventory

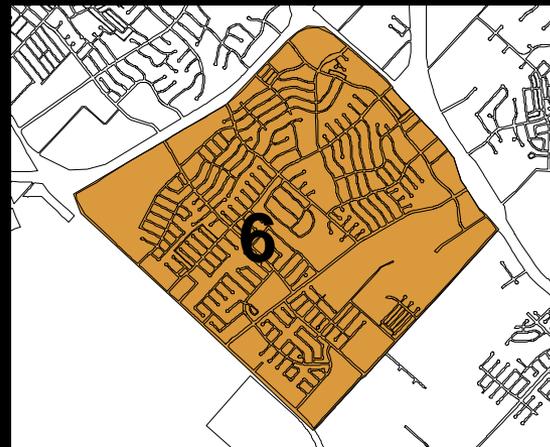

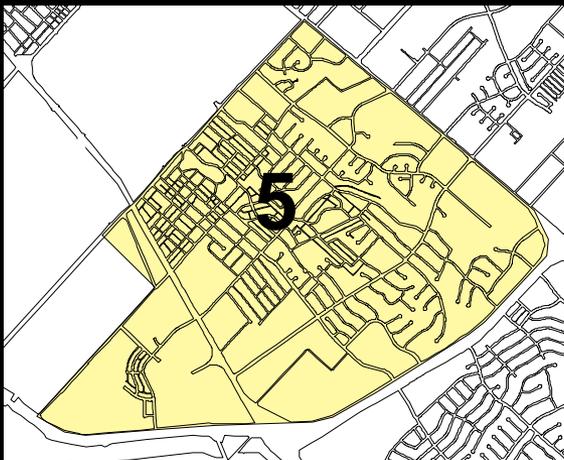

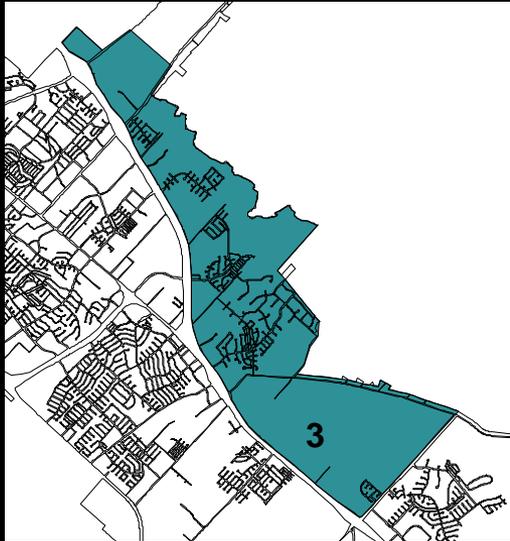

- Limited resources
- Time constraints
- To be used for general planning purposes only
- Not intended to be dynamic and updated
- Project too large for conventional 100 %
- For budget purposes or a special task

City of College Station – Sample Inventory

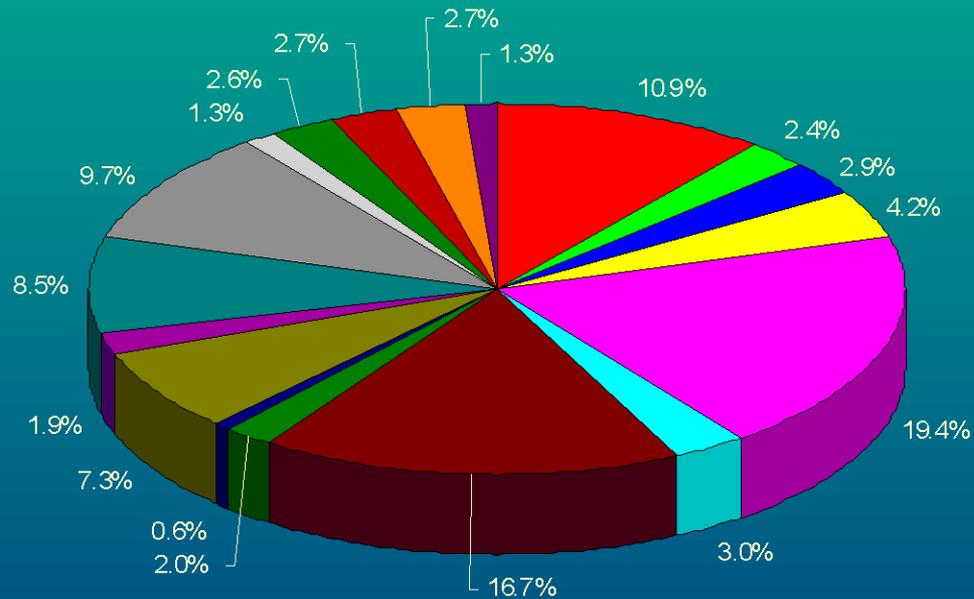

Sample Areas

College Station – Species Diversity

College Station Species Diversity - All Areas Chart A

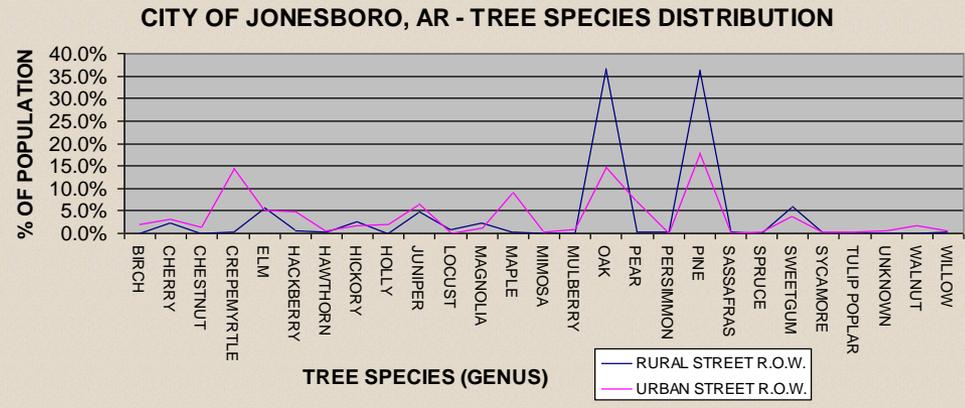

- *Cedris laevigata* (Sugar Hackberry)
- *Diospyros virginiana* (Eastern Persimmon)
- *Fraxinus velutina* (Arizona Ash)
- *Juripeus virginiana* (Redcedar)
- *Lagerstroemia indica* (Crape Myrtle)
- *Melia azedarach* (Chinaberry)
- Other (Detailed in Chart B)
- *Pinus taeda* (Loblolly Pine)
- *Pyrus calleryana* 'Bradfordii' (Bradford Pear)
- *Quercus nigra* (Water Oak)
- *Quercus shumardii* (Shumard Oak)
- *Quercus stellata* (Post Oak)
- *Quercus virginiana* (Live Oak)
- *Sapindus drummondii* (Western Soapberry)
- *Sapium sebiferum* (Chinese Tallow)
- *Thuja* spp. (Arbovitae)
- *Ulmus alata* (Winged Elm)
- Unknown (dead)

Jonesboro, AR – Species Diversity

The inventory identified the following trees growing within the street rights-of-way of Jonesboro.

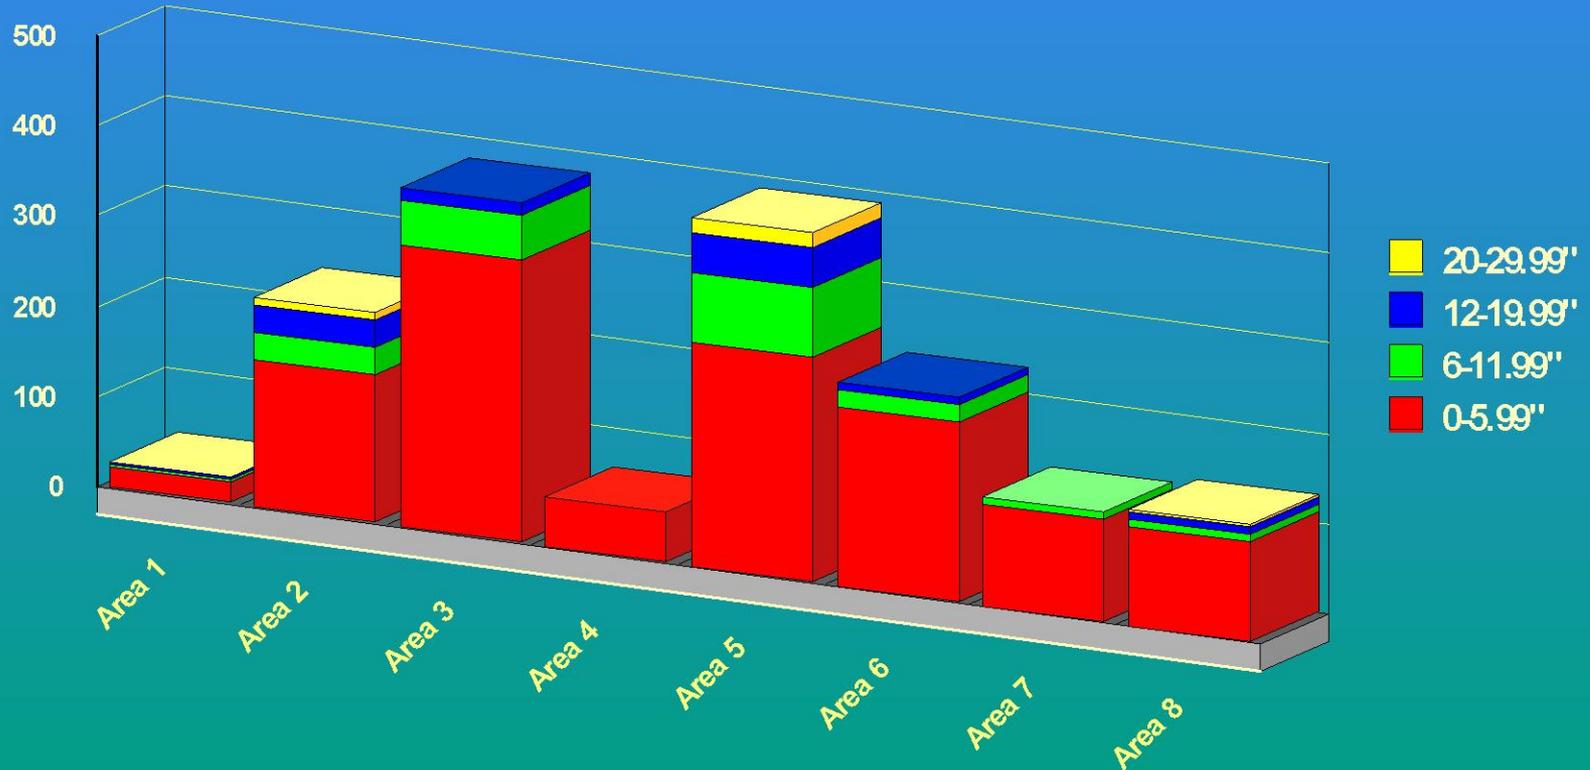

TREE SPECIES (GENUS)	% OF TREES IN RURAL STREET R.O.W.'S	% OF TREES IN URBAN STREET
BIRCH	LESS THAN 1%	LESS THAN 1%
CHERRY	2.3%	3.0%
CHESTNUT	LESS THAN 1%	1.4%
CREPEMYRTLE	LESS THAN 1%	14.4%
ELM	5.7%	5.0%
HACKBERRY	LESS THAN 1%	4.7%
HAWTHORN	LESS THAN 1%	LESS THAN 1%
HICKORY	2.6%	1.7%
HOLLY	LESS THAN 1%	1.9%
JUNIPER	4.9%	6.6%
LOCUST	LESS THAN 1%	LESS THAN 1%
MAGNOLIA	2.3%	1.1%
MAPLE	LESS THAN 1%	9.1%
MIMOSA	LESS THAN 1%	LESS THAN 1%
MULBERRY	LESS THAN 1%	LESS THAN 1%
OAK	36.5%	14.7%
PEAR	LESS THAN 1%	7.2%
PERSIMMON	LESS THAN 1%	LESS THAN 1%
PINE	36.2%	18.0%
SASSAFRAS	LESS THAN 1%	LESS THAN 1%
SPRUCE	LESS THAN 1%	LESS THAN 1%
SWEETGUM	6.0%	3.6%
SYCAMORE	LESS THAN 1%	LESS THAN 1%
TULIP POPLAR	LESS THAN 1%	LESS THAN 1%
UNKNOWN	LESS THAN 1%	LESS THAN 1%
WALNUT	LESS THAN 1%	1.7%
WILLOW	LESS THAN 1%	LESS THAN 1%

Shenandoah 1993 Land Use Map

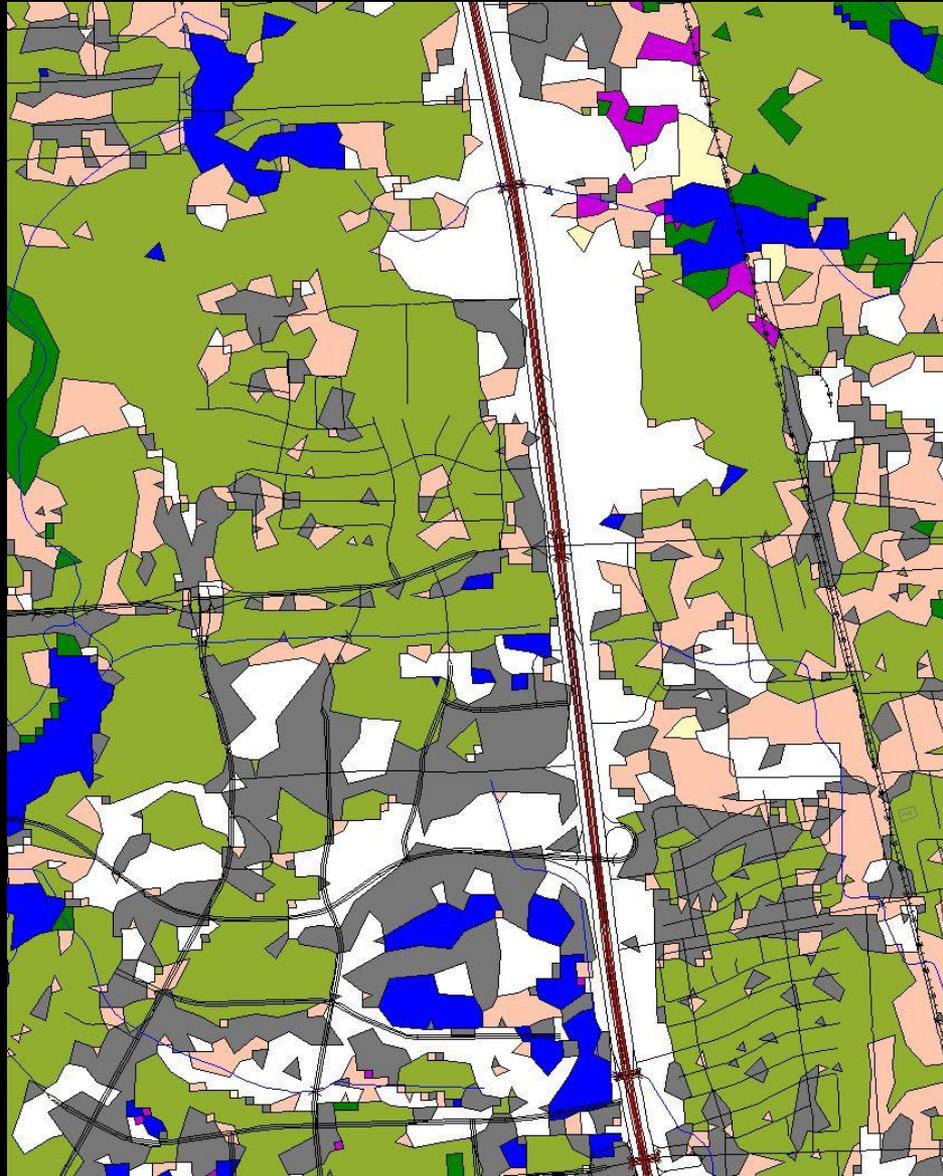

Shenandoah 2000 Land Use Map

Shenandoah 2001 Land Use Map

What is needed?

American Forests recommends increase of canopy to the 40 percent level.

Why?Storm Water Reduction, Carbon Sequestration, Temperature Cooling, Energy Savings, Health.....

More Questions

- What work is needed?
- Are planting spaces available?
- How often does pruning occur? Scheduled?
- How are priorities set? Crisis?
- How is work scheduled?
- Is the public satisfied or are there complaints?

Questions For All

- What needs to be done?
- Who needs to do it?
- How will it be done?
- Who will pay for it?
- When will it be done?
- How will we know when we get there?

Solutions for Greater Canopy

- More street trees
- More park trees
- More green space
- More trees in non-conventional locations, i.e., flood control easements
- Conservation easements

After More Canopy is Created

- How are we going to maintain it?
- Who will maintain it?
- Who will pay for it?

Nice to have new greenspace, but who will “show up” for you at budget meetings?

After We Have More Canopy New Questions for Community

AGAIN,

- Who should do it?

Volunteers?

Non-Profits?

Municipal or Governmental Staff?

Urban Forest Professionals?

**DEPENDS ON THE RESULTS YOU WANT
AND HOW MUCH MONEY YOU HAVE**

Who Else Should Be Involved

- Engineers
- Architects
- Developers
- Planners
- Landscape Architects
- Municipal and county government department heads
- Environmental Professionals

Process

- Professionals in city planning, management, and development all have a process that helps them accomplish community goals and expectations
- The inventory is just one ingredient in the recipe
- **Using the data collaboratively** is the key

Why Plan?

- Remember, trees can't move; therefore they must adapt to new environments
- The question is... can the tree adapt to its new environment fast enough?
- Will the adaptation be according to a specified plan?

This Tree Could Not Adapt Improper Preservation Planning
