8. AMENDMENTS TO THE 2025-2028 TRANSPORTATION IMPROVEMENT PROGRAM, TEN-YEAR PLAN AND THE 2045 REGIONAL TRANSPORTATION PLAN

BACKGROUND

The 2025-2028 Transportation Improvement Program (TIP) is a four-year capital improvements program for transportation projects. Under federal rules, all federally assisted projects must be included in the TIP to be eligible for funding. In addition, federal rules require that regionally significant local projects must also be included in the TIP.

The 2045 Regional Transportation Plan (RTP) is a long-range plan that prioritizes spending on regional transportation projects including short and long-range strategies to ensure the transportation network is safe and efficient. Updated every four years, the RTP outlines a fiscally constrained transportation investment program that is based on the unique needs and characteristics of the MPO region.

Amendments to the TIP and RTP are brought to the Transportation Policy Council for consideration monthly and amended in accordance with the H-GAC Public Participation Plan.

CURRENT SITUATION

A summary of the proposed revisions to the 2025-2028 Transportation Improvement Program is included below.

- Rescope METRO's FY 2025 \$29.2M Congestion Mitigation/Air Quality (CMAQ) funded bus replacement project (MPO ID 15243) from electric buses to compressed natural gas fueled (CNG) buses.
- Update the City of Conroe's funding increase request for their FY 2029 Surface Transportation Block Grant (STBG) funded Old Conroe Road widening and extension project (MPO ID 17101).
- Program the City of Conroe's \$4.5M Federal Transit Administration (FTA) Section 5339, Bus and Bus Facilities Program, 'Lo-No Emissions' grant for procurement of four CNG buses (MPO ID 19239) in FY 2025 with 900K Transportation Development Credits (TDCs) in lieu of matching funds.
- Program \$666K of the Gulf Coast Transit District's FY 2020 and FY 2023 apportionments of FTA Sections 5307, 5310 and 5339 formula fund grants in FY 2025 (MPO IDs 19240, 19241, 19242, 19243, 19247) with 223K TDCs in lieu of matching funds.
- Program the FY 2023 \$710K FTA Section 5310 formula fund apportionment for Harris County Transit's purchase of services and mobility management projects in FY 2025 (MPO IDs 19245, 19246) with 142K TDCs in lieu of matching funds.
- Modify the descriptions and funding amounts of eleven (11) Gulf Coast Transit District FY 2021-FY 2023 apportionments of FTA Sections 5307, 5310 and 5339 formula funded projects previously programmed in FY 2025 (MPO IDs 18932, 18952, 18953, 18954, 19140, 19144, 19145, 19146, 19147, 19152, 19153). Modifications are being made on the recommendation of METRO.

Program the Port of Houston Authority's FY 2022-23 Federal Highway Administration (FHWA)
 Reduction of Truck Emissions at Port Facilities Grant Program award of \$25.1M in FY 2025
 (MPO ID 19365). The demonstration project will purchase portable electric chargers, auxiliary
 power units, and a hydrogen fueling station, as well as reduce emissions from the existing truck
 fleet, perform a traffic assessment, and demonstrate the viability of zero-emissions vehicles. The
 Port will provide \$6.3M matching funds.

ACTION REQUESTED

Transportation Policy Council approval of Resolutions 2025-06 and 2025-07.

Agenda Item 8 TPC Meeting Packet – 1/24/25

Resolution

NO. 2025-06

AUTHORIZING AMENDMENTS OF THE 2025-2028 TRANSPORTATION IMPROVEMENT PROGRAM (TIP) AND THE 2045 REGIONAL TRANSPORTATION PLAN (RTP) FOR THE HOUSTON-GALVESTON METROPOLITAN PLANNING AREA

WHEREAS, the 2045 Regional Transportation Plan was adopted by the Transportation Policy Council on May 19, 2023; and

WHEREAS, the 2025-2028 Transportation Improvement Program for the Houston-Galveston Metropolitan Planning Area was adopted by the Transportation Policy Council on June 28, 2024; and

WHEREAS, the proposed revisions to the 2025-2028 Transportation Improvement Program are consistent with the 2045 Regional Transportation Plan and its finding of conformance with the State Implementation Plan for air quality; and

WHEREAS, the proposed revisions to the 2025-2028 Transportation Improvement Program are consistent with the federal fiscal constraint requirements established for the Transportation Improvement Program and are consistent with the financially constrained 2045 Regional Transportation Plan.

NOW, THEREFORE, BE IT RESOLVED BY THE TRANSPORTATION POLICY COUNCIL (TPC) FOR THE HOUSTON-GALVESTON METROPOLITAN PLANNING AREA THAT THE 2025–2028 TRANSPORTATION IMPROVEMENT PROGRAM AND THE 2045 REGIONAL TRANSPORTATION PLAN BE AMENDED TO REFLECT THE REVISIONS IDENTIFIED IN THE TABLE OF JANUARY 2025 TPC AMENDMENTS.

BE IT FURTHER RESOLVED THAT FEDERAL FUNDS AUTHORIZED BY THE TPC FROM THE CONGESTION MITIGATION AND AIR QUALITY (CMAQ) AND SURFACE TRANSPORTATION BLOCK GRANT (STBG) PROGRAMS REPRESENT A LIMITING AMOUNT. ANY COST OVERRUNS ON PHASES OF WORK AUTHORIZED BY THE TPC OR COSTS INCURRED ON PHASES OF WORK NOT AUTHORIZED BY THE TPC SHALL BE THE RESPONSIBILITY OF THE PROJECT SPONSOR. IN NO CASE, SHALL FEDERAL PARTICIPATION UNDER THE CMAQ AND STBG PROGRAMS BE INCREASED WITHOUT CONSULTATION AND THE EXPRESS APPROVAL OF THE TPC.

PASSED AND APPROVED this 24th day of January 2025, at a regularly called meeting of the Transportation Policy Council.

APPROVED:

Hon. Justin Beckerdorff, Chairman Transportation Policy Council ATTEST:

Never arnold

Hon. Nancy Arnold, Secretary Transportation Policy Council

Agenda Item 8 TPC Meeting Packet - 1/24/25

Resolution No. 2025-07

APPROVING THE AWARD OF TRANSPORTATION DEVELOPMENT CREDITS (TDCs) AND AUTHORIZING RELATED AMENDMENTS TO THE 2025-2028 TRANSPORTATION IMPROVEMENT PROGRAM (TIP), AND THE 2045 REGIONAL TRANSPORTATION PLAN (RTP) FOR THE HOUSTON-GALVESTON METROPOLITAN PLANNING AREA.

WHEREAS, Texas Administrative Code, Title 43 Subchapter H, identifies the purpose, goals, and administrative requirements for the Transportation Development Credit Program in the State of Texas, including the sub-allocation of credits to Metropolitan Planning Organizations (MPOs); and

WHEREAS, the Texas Department of Transportation has documented the current balance of credits allocated to H-GAC, the MPO for the Houston-Galveston Transportation Planning Area; and

WHEREAS, Texas Administrative Code, Title 43 §5.106, establishes requirements for the award of transportation development credits by MPOs; and

WHEREAS, the Houston-Galveston Area Council has established a documented process for the evaluation of applications and the award of credits; and

WHEREAS, the Houston-Galveston Area Council is in receipt of requests for credits; and

WHEREAS, the award of credits for these purposes is consistent with the Policy governing the consideration of requests for credits adopted by the Policy Council on November 20, 2020.

NOW, THEREFORE, BE IT RESOLVED BY THE TRANSPORTATION POLICY COUNCIL (TPC) FOR THE HOUSTON-GALVESTON TRANSPORTATION PLANNING AREA THAT TRANSPORTATION DEVELOPMENT CREDITS BE MADE AVAILABLE TO THE PROJECTS IN THE ATTACHED TABLE#1 AND THAT THE TRANSPORTATION DIRECTOR IS DIRECTED TO ENTER INTO ANY NECESSARY PROJECT AGREEMENTS.

PASSED AND APPROVED this 24th day of January 2025, at a regularly called meeting of the Transportation Policy Council.

APPROVED:

Hon. Justin Beckendorff, Chairman

Transportation Policy Council

GS AMENDMENT TO THE 2025-2028 TRANSPORTATION IMPROVEMENT PROGRAM AND THE 2045 REGIONAL TRANSPORTATION PLAN

BACKGROUND

The 2025-2028 Transportation Improvement Program (TIP) is a four-year capital improvements program for transportation projects. Under federal rules, all federally assisted projects must be included in the TIP to be eligible for funding. In addition, federal rules require that regionally significant local projects must also be included in the TIP.

The 2045 Regional Transportation Plan (RTP) is a long-range plan that prioritizes spending on regional transportation projects including short and long-range strategies to ensure the transportation network is safe and efficient. Updated every four years, the RTP outlines a fiscally constrained transportation investment program that is based on the unique needs and characteristics of the MPO region.

Amendments to the TIP and RTP are brought to the Transportation Policy Council for consideration monthly and amended in accordance with the H-GAC Public Participation Plan.

CURRENT SITUATION

A summary of the proposed revisions to the 2025-2028 Transportation Improvement Program is included below.

• Program the Federal Highway Administration Reduction of Truck Emissions at Port Facilities Grant Program award of \$3.7M to Jacintoport International, LLC in FY 2025 to install a new terminal operating system (MPO ID 19366) which will improve the efficiency of truck pickups and deliveries in the container yards and will thus reduce air and noise pollution at the Jacintoport Terminal at the Port of Houston and Seaboard Marine Terminal at Port Miami. Jacintoport International, LLC will provide \$3.7M of matching funds.

ACTION REQUESTED

Transportation Policy approval of Resolutions 2025-06 and 2025-07.

2025-2028 TIP and 2045 RTP January 2025 TPC Amendments

VOLUME 1 – TECHNICAL APPLICATION

SECTION 1 - COVER PAGE AND TABLE OF CONTENTS

SECTION 1 - COVER PAGE AND TABLE OF CON	
Project Name	Emissions reduction through automation for Jacintoport International and Seaboard Marine
Eligible Entity Applying to Receive Federal Funding	Jacintoport International a wholly owned subsidiary of Seaboard Marine and Seaboard Marine.
Total Project Cost (from all sources)	The total first year cost is \$4,460,000 with a total 5-year cost of \$18,660,000. Which includes annual fees and support.
Reduction of Truck Emissions at Port Facilities Grant Program funding request (Federal share)	\$3,650,000
Are matching funds restricted to a specific project component? If so, which one?	There are several components of this complete project. Jacintoport International and Seaboard Marine are requesting funding for only the technology portion of this project. Jacintoport International and Seaboard Marine are requesting 50% Federal funding and will match/contribute 50% for the technology portion of this project cost. Jacintoport International and Seaboard Marine will pay ALL civil and construction related work and other fees that are not technology related.
State(s) in which the project is located	This project has 2 locations: Jacintoport terminal is located on the coast of Houston Texas, in Galveston Bay, in the Gulf of Mexico. This port is in Harris County which

	is part of region 6 of the EPA, congressional District TX029. Seaboard Marine is in PortMiami, County of Miami-Dade, in the State of Florida. EPA region 4. Congressional District FL0027
 Is the Project currently programmed in the: Transportation Improvement Program Statewide Transportation Improvement Program Metropolitan Planning Organization Long Range Transportation Plan State Long Range Transportation Plan State Freight Plan 	This project is not a part of any program or receiving any other funding
Methods used to reduce truck emissions (briefly describe)	Improvements in Port efficiency. Jacintoport International and Seaboard Marine are proposing to install a new shared terminal operating system (TOS). This will enable Jacintoport and Seaboard to reduce truck idling time at the gates as well as improve the efficiency with the trucks picking up or dropping off containers in the yard. The TOS will also reduce yard equipment operating time. All these efficiencies and reduce gate idling time will result in a effectively reducing considerable amount of carbon emissions, air pollutants and noise associated with idling trucks and equipment.

SECTION II - PROJECT NARRATIVE

Short Summary: Jacintoport International is a wholly owned subsidiary of Seaboard Marine. Jacintoport is in the Houston Ship Channel and Seaboard Marine is in PortMiami. Jacintoport and Seaboard share many resources from staffing to technology. Together Jacintoport and Seaboard Marine are proposing to install a new terminal operating system (TOS). This will enable both entities to significantly reduce the per-truck idling time at the gates by a minimum of 10 minutes. Which in turn will reduce truck congestion within the port and related roads leading into the ports. The TOS system will also improve the efficiency with the trucks picking up or dropping off containers in the yard as well as increasing the efficiency of yard equipment, reducing operating time. All these efficiencies coupled with reduced idling time at the gates will result in a significant reduction of the amount of carbon emission and air and water pollutants that would affect their respective ports and the related waters and surrounding communities.

Introduction

Jacintoport International will be the lead applicant with Dan O'Neil – Compliance Director for both companies and our consulting firm Leonardo Academy's Tracy Spoeth – Director of Sustainability Initiatives acting as our primary point of contact.

Jacintoport International and Seaboards Marines need a system to help them greatly improve their efficiencies which in turn will allow growth but according to the company joint sustainability plan, it also needs to reduce carbon emissions all while maintaining superior customer service.

That is a tall order, but by implementation of a modern TOS (Terminal Operating System) this will provide the best solution to manage operations, substantially increase efficiencies, enabling the terminals to reduce risk and maximize performance all while <u>reducing diesel related</u> emissions from gate idling time by 50% for Seaboard and 37% for Jacintoport.

Port information

Jacintoport Terminal is located on the coast of Houston Texas, in Galveston Bay, in the Gulf of Mexico. This port is in Harris County which is part of region 6 of the EPA. Jacintoport Terminal is represented by congressional district TX029. Seaboard Marine is located on Dodge Island just off the coast of Miami Florida in the Atlantic Ocean at PortMiami. PortMiami is in Miami-Dade County which is part of region 4 of the EPA and is considered a NATA (National Air Toxics Assessment) priority county. PortMiami is represented by congressional district FL027.

Issues and challenges

Seaboard Marine experienced severe growth in container lift volume at its PortMiami in 2021 (estimated 23% over 2020 and similar growth in 2022), and with any growth comes added challenges as the facility faces a diminishing terminal footprint due to the forced return of subleased acreage from neighbor and lessor; Port of Miami Terminal Operating Company (POMTOC). This growth has caused extreme back up onto the port – causing traffic slowdowns or stoppages on the highway leading into the port and even leaving the terminal. Wait times to get through the gates are reaching or exceeding 45 minutes. With most of these trucks have an engine model year prior to 2010, some even date back to the 1980's and 1990's, these trucks are

of the highest producing carbon emissions and pollutants out there. With these trucks idling for long periods of time they are putting the surrounding communities, which the majority of them are disadvantaged, at high risk for respiratory health-related illnesses.

Jacintoport has experienced growth, but not to the extreme that Seaboard has. The current systems at Jacintoport are archaic. It is the nature of Jacintoport's systems that causes a normal 41-minute delay, and therefore the desire needs for a TOS.

Safety

Safety is always a concern at Jacintoport/Seaboard, and we are always striving to keep every employee, customer, and visitor safe. Therefore, when evaluating ways to improve the efficiency of the operations and reduce emissions, the added safety benefits that were coupled with these efficiencies really made the decision to purchase a TOS system that much easier. Benefits of the proposed TOS include:

- The automation of the gates not only will reduce wait times, which in turn reduces idling times, it will alleviate employees and truck drivers to be out walking around during the truck inspections. This was always a concern having people around where trucks were driving in and around.
- o In the container yard presently truck drivers must get out of their truck and search the "stacks" of containers to locate the container they are picking up requiring them to walk around heavy equipment. With the TOS the driver will know the exact location of the container they are picking up and there will be no reason to get out of the truck.
- Currently there are "checkers" who manually update container locations the proposed TOS will automatically update the container locations, eliminating the need for employees to walk around the heavy equipment while simultaneously increasing efficiency.
- The TOS will provide a more organized flow of traffic with less congestion of idling trucks, reducing the potential for accidents.

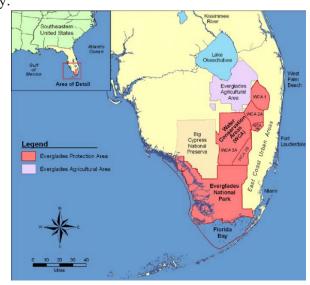

Climate Change and Sustainability

When people talk about the effects of carbon emissions and pollutants that are projected from diesel engines, they generally reference the effects on the air quality. According to the climate and Economic Justice Screening Tool, overall, within PortMiami and the surrounding communities the diesel particulate matter exposure is 94th above the 90th percentile and for Jacintoport the population at or greater than the 90th percentile for diesel particulate matter exposure is nearly 279,000 people. What many do not realize is these emissions also greatly affect our water ways as well. Carbon dioxide and water mix to form carbonic acid, with byproducts of hydrogen and bicarbonate ions. Hydrogen and carbonic acid are what contribute to oceanic acidification. Over the last 200 years the average acidity in the oceans has risen by about 30%. Increased oceanic acidification makes it harder for many species of plants, animals, and fish to survive. Most urgently, organisms like corals, mussels, clams, oysters, and plankton are already showing signs of struggle in the increasingly acidifying ocean. Corals provide shelter for 25% of marine species and protect coastal communities from erosion and storm surges. This increased acidity of our oceans will have a chain-reaction effect, as many other species of fish, mammals, and even many humans depend on these ecosystems and food sources to survive. If ocean acidification is left unchecked, the shellfish industry in the US alone is expected to lose upwards of \$400 million annually by the year 2100. This will ultimately result in job loss for many of those depending on the shellfish industry.

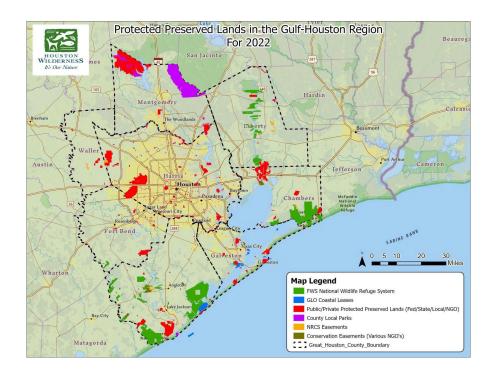

Page | 6

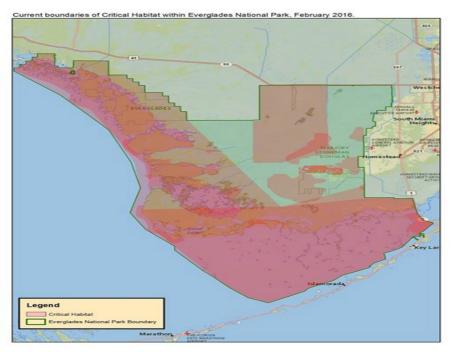

Jacintoport International/Seaboard Marine take environmental responsibility seriously and have been applauded by their respective ports for "consistently demonstrating their dedication environmental stewardship". Seaboard partners with the PortMiami and other organizations to increase the sustainability of the waterways and this project is considered an excellent way to contribute to reducing the emissions that will affect the waterway of which each property is in and within proximity to.

Jacintoport's property is located within Harris County, which contains around 15,400 acres of conservation land (see the red portions of image 1 below). The Port of Houston is also within sixty miles of more than fifteen Protected Areas Database (PAD-US) Gap Analysis Project (GAP) tier 1 and 2 permanently protected lands (darker green is GAP 1 and lighter green is GAP 2), and over ten GAP 3 permanently protected areas (gray). Harris county alone is home to 54 plant and animal species of Global Conservation Status Rank of G4 or higher (G4 – some cause for long-term concern, G3 – Vulnerable, G2 – Imperiled, G1 – Critically imperiled)

Seaboard's property is adjacent to Biscayne Bay National Park. Seaboard's property is also 50 miles from the entrance to Everglades National Park (wetlands), 60 miles from the entrance to Big Cypress National Preserve (wetlands). There are also other water conservation areas (WCAs) and agricultural areas of special interest within 20-30 miles of Seaboard Marine. (See image below). Within these areas there are 39 native Florida species that are federally listed as threatened or endangered or are candidates for listing under the Endangered Species Act of 1973 and approximately 180 plant and animal species that occur in Everglades are listed by the State of Florida as threatened, endangered, species of special concern, or commercially exploited. Note the critical habitat in the map below, and how close it is to PortMiami (Seaboard Marines property)

In 2021 approximately 88,483 trucks and in 2022 approximately 94,055 trucks passed through Jacintoport International's operations. Approximately 339,705 trucks in 2021 and 357,656 trucks in 2022 passed through Seaboard Marines operations. It currently takes around 41 minutes in Jacintoport and 20 minutes in Seaboard to process each truck coming in and out of the gates. Which in turn means that each truck is idling for at least 41 or 20 minutes for each respective port. Based on that data it has been calculated that just for the processing time alone while the trucks are idling, they are emitting 395.09 MT CO2 at Jacintoport and 739.92 MT CO2e at Seaboard per year. With just the efficiency of the gate TOS reducing the amount of time a truck spends at the gates to get processed to 24 minutes at Jacintoport and 10 minutes at Seaboard.

This project will realize a minimum 37% reduction at Jacintoport and 50% reduction at Seaboard in carbon emissions produced and a reduction of 16,594 gallons at Jacintoport and 40, 065 gallons at Seaboard of fuel consumed from the efficiencies realized at the respective gates. See calculations below. This enhancement will not only improve Jacintoport and Seaboards efficiency and reduce emissions but also have a significant impact on the overall logistics landscape in Texas and Florida.

Equity and Justice 40

PortMiami is and has been surrounded by economic and environmental injustice for decades. Using the Climate & Economic Justice Screening tool 62-97% of the communities' household incomes are at or below 100% of the Federal poverty level and 90% and above of the households have no one over age 14 that speaks English fluently.

Jacintoport is certainly affected by environmental injustice but not to extreme that Seaboard is. Using the Climate & Economic Justice Screening tool, 15% of the community's household incomes are at or below 100% of the Federal poverty level, considerably more than the national percentage of 11.4%. 12% of the households have no one over age 14 speaks English fluently, compared to the national percentage of 5%.

According to the DOT Transportation Disadvantaged Census within the Miami-Dade County, of Seaboard operates in, 87% of the people are minorities and 28% of the population is within the age bracket (below age 10 or above age 64) that is considered more prone to suffering from environmental health hazard related issues. Whereas within Harris County where Jacintoport operates in, 71% of the people are minorities and 26% of the population is within the age bracket (below age 10 or above age 64. Therefore, by Seaboard reducing 50% and Jacintoport 37% of their carbon emissions from just from idling trucks at the gates, they are making great strides in positively effecting large environmental disadvantage communities of people each year.

Workforce Development, Job Quality and Wealth Creation

A TOS is the modern marine terminal's primary record-keeping, planning, control, and monitoring instrument. The system facilitates efficient use of assets, labor, and equipment and allows for workload scheduling in core areas like gate planning, equipment control, and ground stowage strategies.

Seaboard Marine experienced severe growth in container lift volume at its PortMiami in 2021 (estimated 23% over 2020 and similar growth in 2022), and with any growth comes added challenges as the facility faces a diminishing terminal footprint due to the forced return of subleased acreage from neighbor and lessor; Port of Miami Terminal Operating Company (POMTOC). The only way to address the issue of space reduction is to condense its footprint and grow vertically. This can be achieved by increasing the container storage blocks and modifying cargo staging areas, doubling TEUs' current capacity from one thousand (1,000) containers to two thousand (2,000) containers. This, coupled with the acquisition of Rubber Tire Gantry (RTG's) cranes capable of stacking five (5) container high and six (6) container deep stacks,

would be considered essential to organize the terminal's designated areas which will cause a significant service impact. Making a modern TOS system operational is complete necessity for increased efficiency. Increasing capacity of Seaboards terminal will also increase the need to create more well-paying jobs. Currently Seaboard's employee workforce is more than 90% minorities while Jacintoport employs a minority workforce of 85%. With the convenience of Miami-Dade Transit has rail and bus service in and around Miami and to downtown Miami coupled with the shuttle to/from the port operations throughout the day it makes it easy for the residents of all the communities to take low-cost public transportation to Seaboard. Jacintoport and Seaboard currently partners with 40 different organizations for the underserved communities that help their members obtain jobs at Jacintoport and Seaboard. Jacintoport/Seabord has policies in place to ensure the safety and wellbeing of their employes, which include but not limited to Anti-harassment, anti-retaliation, anti-discrimination, and third-party reporting.

The TOS will enable Jacintoport International and Seaboard Marines terminals to comply with governing regulations (Ocean Shipping Reform Act of 2022) while allowing to increase planning time to optimize assets. It will facilitate operating efficiencies like fuel conservation and equipment wear and tear, as it will enable equipment like cranes and top loaders to be allocated efficiently, optimizing the labor force servicing vessels. Enhancing turnaround time at the gates and berths are other areas which would benefit from a TOS as the provision and visibility of data garnered from the system would provide opportunities to improve operations and identify potential bottlenecks.

Navistar research has shown that a typical linehaul fleet sees 20-40% idle time over the course of a year. More than 190 of the trucks that come in and out of Seaboards terminal are owner/operated as well as minority owned and the majority of trucks that come in and out of Jacintoport are independent third party contracted trucks. With enhanced turn at the gates and loading and unloading areas there will be considerable fuel savings. "A general rule of thumb is every extra 10% decrease in idle time equates to another percentage point in fuel economy." This increased fuel economy equates to increased profit for the truck drivers. Coupled with the increased efficiencies this will allow for the truck drivers to have more productive days allowing them to have more time to have a work/life balance, which is essential to their health and safety. With the implementation of the TOS at Jacintoport and Seaboard Marine it will not only greatly reduce harmful emissions to our environment, but this innovative project will extend beyond their operations by positively impacting our trade ecosystem and the regional prosperity.

Regulatory Challenges

This project is technology based and therefore, the "Buy America" certification is not applicable here. Nor is it foreseen that there are any conflicts or challenges with this project with respect to the Federal Motor Vehicle Safety Standards or the National Environmental Policy Act.

Implementing the TOS will have far-reaching positive impacts, benefiting their respective entire communities and is in line with US customs and Boarder Protection (CBP) 2023 Green Trade Strategy.

Statement of work and long-term operations

Throughout the years, both Jacintoport and Seaboard have balanced operations using manual processes in tandem with in-house ERP. However, as the terminals grow, manual processing of

core functionalities like equipment utilization, loading and discharging of vessels, and yard planning eventually results in inefficiencies and lost revenue and increased emissions, noise and extra wear and tear on equipment and over working staff. Upgrading to a TOS will optimize the management of truck traffic and vessel operations, reducing waiting times and restructuring cargo handling processes. Utilizing advanced technologies will enhance operational efficiency through improved resource allocations. By maximizing the productivity of the container handling equipment and cranes, this will eliminate even more emissions and noise because of the less hours worked by the machines through the efficiencies generated by the TOS.

Implementing a TOS goes beyond mere operational improvements. It will be streamlining truck flow, therefore effectively reducing carbon emissions, air pollutants, traffic congestion and noise levels associated with idling and traffic congestion. It will furthermore enable maximum visibility of what is in the yard and will be readily available by pulling reports, recaps, or scan plans. Yard Inventory will be easily maintained via updates from handhelds. This is a requirement for any terminal, especially when dealing with a terminal with potential land constraints like Seaboard. These environmental benefits align seamlessly with the requirements of this grant.

Moving to a TOS will additionally allow each port terminal to move to a modern platform allowing integration with Radio-Frequency Identification Devices (RFID), Global Positioning Systems (GPS) opportunities, and any other technologies Jacintoport and Seaboard wants to utilize to pass data to the TOS seamlessly.

The customer portal and relative appointment options will remove any current paperwork validations resulting in optimal efficiencies at the gates. Also, paperwork that is used to be handled at the gate for reefer trucks and hazardous transports will be received electronically, reducing gate time and emissions.

With the use of the system and other technologies as containers gate in against the vessels, they will be allocated to locations as close to the vessel as possible, allowing for fast loading on the vessel, resulting in reduction of emissions. Subsequently, using the TOS vessel planning and crane management modules, the stevedores can see changes in the vessel plans on a tablet instead of having to rerun paperwork every time a plan changes.

The TOS will also handle hazardous cargo or equipment-defined segregation for the yard and vessel, always ensuring proper segregation.

Jacintoport and Seaboard have done extensive research and evaluation on five commonly used TOS in the industry and has concluded that the Paseco - Poseidon Terminal Operating System is the best system for their operations. This system will allow the 2 companies to share in the technology. The Pasecos' system will grow with the terminals, and scalable for both port operations. There are many similarities between both ports but there are also many differences, that is what makes Paseco so desirable as it can be customized for each port's unique situation. Since this will be shared technology, each port will pay its appropriate allocated cost through their capital budget reserves -no financing will be used – as well as each port will be responsible for paying its annual licensing and maintenance fees through their annual operating budget. Seaboard/Jacintoport are requesting 50% of the budget for this project and once approved will

start immediate implementation. This is an expensive investment for both ports, but the financial benefits from the efficiencies for both the ports and the owner/operators that are hauling cargo, the ability to continue to grow, and the great environmental impact that will be realized is what makes the implementation of this TOS system so vital. Both companies believe that investment in the future of the trade community and its sustainability – reducing the impact that the trade community has on the environment is vital.

To do this correctly the total implementation process will take several years, but within the first year of implantation the reduction in idle time from gate operations will be realized for both locations. After the implementation of the gate operations the use of the rest of the system for the container yard and shipping modules will be implemented.

Data Collection

This being a technology-based project, continuous data collection will be ongoing. This data will be readily available to produce customizable reports as well as "canned" ones. Both terminals plan on producing reports and monitoring the following frequently to ensure their objectives of this projects are being realized:

- Trucker turns time (reduced idling time)
- Increased capacity allowed by densifying the terminal.
- More efficient operations (reduced handling of containers, reduced idle time of yard trucks and RTGs/Top Loaders)

Seaboards/Jacintoports vision of fostering innovation and excellence is apparent with the implantation of a TOS system, they will be significantly improving on reducing congestion within and out of the port, reducing idling times of not only the trucks but of yard equipment as well. Significant efficiencies will be realized with storing and pulling containers, ability to unload and load ships in a timely efficient manner. All the efficiencies equate up to less idling or running of diesel-powered equipment, which makes for significantly reducing greenhouse has emission in the transportation and trade sector. This creates a more sustainable and healthier environment for the workers on the port as well as the surrounding communities.

Community engagement and outreach

Seaboard/Jacintoport actively engages in community outreach programs, fostering partnerships that address concerns and mitigate potential impacts on the surrounding communities and our fragile ecosystems. In 2022 they sponsored or donated to more than 32 organizations totaling almost \$88,0000 and almost \$12,000 in freight donations. Currently there are over 30 partnerships with organizations for employing disadvantaged community residents. Seaboard/Jacintoports has a great working relationship with drivers, vendors, customers, and local, state, and federal agencies. They have received over 20 letters of support for submission of this grant and 133 owner/operators signed a combined letter of support. This demonstrates the admiration and belief that these companies and people have in them on being able to successfully implement and grow this project so that it will benefit the so many communities and our ecosystem.

SECTION III - MANAGEMENT STRUCTURE

Roles and Responsibilities

- LEO-will work in conjunction with Dan O'Neil as the contracted grant administrator/fiscal agent for this project and will be responsible for:
 - o Performance measurements
 - o Ensuring the projects completes its milestones in a timely fashion.
 - o Coordination of draw requests and aiding in the proper distribution of funds.
 - o Filing of all quarterly and final reports
 - o Prepare of performance evaluation
 - Will work closely with the Seaboard Marine and Jacintoport. LEO will ensure the two ports:
 - Utilize competitive procurement process for the procurement of the components of the Terminal Operating System.
 - Give minority owned companies the opportunity to submit a proposal for components of this project.
 - Projects stay on tasks with the timeline and milestones outlined in this application.
- Seaboard Marine and Jacintoports International will be responsible for:
 - o Issuing purchase orders to all vendors are completed in a timely fashion.
 - Ensure all preparations and civil work (not included in this grant) are complete for the installation of the technology.
 - o Install technology and gates.
 - o Train staff in how to use the new system.
 - o Provide LEO will all invoices, purchase orders, and proof of payments.
 - Providing LEO with monthly and quarterly data needed to track and monitor the success of this emissions reduction for this project.
 - Prepare and distribute a press release through a wire service as well as through social media, noting the emissions reductions obtained and giving credit to the DOT for providing financial support.

Programmatic Capability and Past Performance

LEO has been hired by Jacintoport and Seaboard to serve as the grant manager of this project.

Leonardo Academy (LEO) has a successful record of completing all its DERA projects totaling over \$31 million since the involvement in the program dating back to 2008/2009. Examples of some of the projects are listed below.

• 2020 EPA Region 5, Grant #DE-00E02857-0 to replace 4 non-tier construction cranes with 4 tier 4f construction cranes; Region 5, Grant #DE-00E02859-0 repower 2 ferry engines; EPA Region 7, Grant #DE-97785001-0 to replace 10 class 4 buses with 2021 propane fueled buses: EPA Region 8, Grant #DE-96860901-0 to replace 2 non-tier construction cranes with 2 tier 4f construction cranes.

- 2018 EPA Region 7, Grant of #DE-97766801-0 to replace 10 class 8 delivery tractors with clean diesel tractors; replace 10 class 4 buses with 2020 propane fueled buses, and 2 class 7 delivery trucks with 2019 propane delivery trucks.
- 2016 EPA Region 7, Grant #DE-97758601-0 to replace 50 class 8 tractors with new clean diesel tractors and to replace 13 class 8 tractors with new CNG Tractors. CFDA number 66.039.

Leonardo Academy's Staff is highly experienced in grant and project management and committed to tracking and documenting all aspects of this project from initiation to completion. It is the intent to be on site to inspect and obtain photographic evidence of the TOS system and related components being in place and operational. Records will be kept of the entire process as well as documentation and reports of all emissions reductions. All records, photographs, invoices, reports, and any other documentation regarding this project will be stored on a secured network, administered by Leonardo Academy.

Seaboard and Jacintoport, have a great history of rolling-out emission reduction projects. Seaboard/Jacintoport are very well versed in grant handling and have specific Accounting and Purchasing procedures that they have developed to make sure that they meet or exceed the guidelines and regulations required for the grants that they receive. Since 2017 Jacintoport has successful obtained and complete multiple emission reduction grants to replace old highly emission producing equipment with Tier 4 or Propane equipment:

- 40-yard mules replaced with Tier 4 equipment
- 31 forklifts with propane
- 5 empty handlers to Tier 4
- 2 top loaders to Tier 4

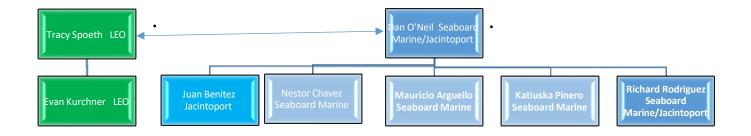

Since 2013 Seaboard Marine has successfully been awarded and completed 10 facility related grants and 4 emissions reduction grants.

- 4 Generator Trailer Mounted Sets
- 12 Diesel particulate Filters for mules
- 2 different grants replacing a total of 7 yard mules with Tier 4 mules.

Both Jacintoport and Seaboard have plans to replace more mules with either LP or Electric mules within the next 2 years.

Project Teams Organizational Structure

SECTION IV - STAFFING DESCRIPTION

Daniel O'Neil – Seaboard Marine/Jacintoport - Director of Compliance and LCL Services. - PRIMARY POINT OF CONTACT - Daniel is responsible for oversite of various areas, including construction projects and purchase and management of port equipment amongst other things. Daniel has managed the grant process for various grants including several FEMA Port Security Grants and Florida Department of Environmental Resources port emissions reduction grants. Daniel has had leadership roles in the cargo shipping industry for over 40 years with the last 16 at Seaboard Marine.

Tracy Spoeth - LEO (Leonardo Academy) – Director of Sustainability Initiatives: Tracy joined LEO in 2009 as their Accountant and Human Resource Manager. Now she is the Director of Sustainability Initiatives who acts as the senior program manager for all our grant projects, contracts, and sub-agreements. She has been writing, managing, and working with DERA and other sustainability grant programs since 2009. She is also the manager of our Event Emissions and Sustainable Land Management programs as well as LEO's accounting and operations. Tracy earned a B.S. in Managerial Accounting from the University of Wisconsin-Stevens Point.

Evan Kurschner – LEO (Leonardo Academy) – Sustainability Initiatives Assistant: Evan joined LEO in early 2023 and is responsible for coordinating, manipulating, and evaluating data, quality control and writing of reports for emissions projects. He serves as our grant assistant as well as being responsible for many administrative project tasks. Evan earned his bachelor's degree in mechanical engineering at Iowa State University.

Mauricio Arguello – Seaboard Marine -Supervisor of Finance and Accounting. Mauricio is responsibility for the Treasury, Fixed Assets, Inventory, and some areas of General Ledger. Mauricio has administered over 10 grant projects within his role as Seaboard Marine.

Katiuska Pinero – Seaboard Marine - Senior Manager of Operational Cost Control. Katiuska has over 27 years of experience with Seaboard Marine and 15 years in her present role. Katiuska is the lead in our purchasing efforts ensuring the vendor selection and payment is compliant with our policies.

Richard Rodriguez - Seaboard Marine/Jacintoport - Vice President of Operations. Richard is the executive responsible for operations at our US terminals and is leading our pursuit of a more efficient and environmentally friendly operation. Richard has been with Seaboard Marine for over 6 years.

Juan Benitez - Jacintoport International - Director of Terminal Operations. Juan graduated in 1981 as Flight Dispatch Operations Officer, Load Master for Cargo Airlines in Madrid, Spain. He transitioned to the shipping Industry in 1988 when he had the opportunity to join Sea Land Service and from then until the present, has devoted himself to the container and general cargo industry. Currently, he is focused on developing and implementing operational process controls and quality improvement initiatives. He was responsible for the introduction of the state-of-the-art technology (Navis) in 1994 at the Port of Miami with

Universal Maritime Services (today APM Terminals) and in 2012, also Navis N4, in a greenfield project for International Container Service Inc. (ICTSI) in Manzanillo, Mexico.

Nestor Isaias Chavez von der Brelje - Seaboard Marine - Regional Systems Manager. Nestor has 30+ years of IT experience. Originally graduated in IT systems at Venezuela, Nestor specializes in different IT activities such as Networking infrastructure, System solution implementations and Technological solutions for company processes. Nestor uses his knowledge and positive attitude with fireless energy to provide control and efficient management of technology platforms in organizations, through knowledge of the latest computer technologies and communications generating greater efficiency, competitiveness and contribution to the development of enterprises but also to lead and encourage others to work and succeed.

VOLUME 2 – BUDGET APPLICATION

Section I – Application Standard Forms

Attached are:

SF-424

SF424A

Section II – Summary Budget Narrative

With this project a Terminal Operating System will be implemented to replace outdated and manual systems which cause many inefficiencies at the port gates and within container yards as well as shipside for both Jacintoport International and Seaboard Marine. These inefficiencies cause unwarranted and unnecessary idling time for the trucks. The total capital cost for this projects TOS hardware and first year annual support and the future construction, gates and materials cost is \$16,012,000. Jacintoport and Seaboard are NOT including the cost of construction, gates and materials in this application, only technology capital budget cost are being including. The total capital budget cost for this project is \$7,300,000. Jacintoport and Seaboard will be paying their respective portions of the 50% shared technology capital budget purchase. It is requested that the DOT provide the other 50% of this purchase to support 50% reduction in gate emissions at Seaboard Marine and 31% reduction of gate emissions as Jacintoport. Neither Jacintoport nor Seaboard will be receiving any other funding from any sources (no loans, grants etc.) Together with their Compliance Direct-Dan O'Neil, Tracy Spoeth – Director of Sustainability Initiative from LEO are committed to ensuring that this project is completed as outlined in the application and that the funds provided by the DOT are used as designated.

Section II – Summary Budget Narrative

	Year 1 Cost	Year 2 Cost	Total Cost
TOS System	\$ 1,700,0	000.00 \$ 1,090,000.00	\$ 2,790,000.00
Wireless	\$ 350,0	000.00 \$ 300,000.00	\$ 650,000.00
Data Center Hardware	\$ 400,0	000.00 \$ 200,000.00	\$ 600,000.00
Mobile Device Terminals	\$ 200,0	000.00 \$ 50,000.00	\$ 250,000.00
Control center	\$ 300,0	000.00 \$ 100,000.00	\$ 400,000.00
Other Modules TOS	\$ 310,0	000.00 \$ 500,000.00	\$ 810,000.00
Location and Proximity Detection	\$ 1,200,0	000.00 \$ 600,000.00	\$ 1,800,000.00
Total Cost	\$ 4,460,	000.00 \$ 2,840,000.00	\$ 7,300,000.00
Total Federal Share	\$ 2,230,	000.00 \$ 1,420,000.00	\$ 3,650,000.00
Total Non-Federal Share	\$ 2,230,	000.00 \$ 1,420,000.00	\$ 3,650,000.00

Section III – Cost Share Information

Commitment letter from Jacintoport International/Seaboard Marine is attached.

Section IV – Grant Funds, sources, and Uses of Project Funds

No other funding sources outside of the Grant Funds (\$3,650,000-50%) supplied by the DOT and Jacintoport and Seaboard Capital Fund Budget (\$3,650,000-50%) will be used.

Section V – Organizational Information

- 1. Exception to award terms Not applicable
- 2. SAM UEI LPZ5AKKTYNL6
- 3. Single Audit The past grant funding that has been received is under the required amount for having a single audit.
- 4. Conflict of interest Neither Jacintoport International, Seaboard Marine, or Leonardo Academy (LEO) have no conflict of interest.
- 5. Federal or State Audit Neither Jacintoport International, Seaboard Marine, or Leonardo Academy (LEO) has been audited or reviewed by any Federal or State agency.
- 6. Terminated Contracts Neither Jacintoport International, Seaboard Marine, or Leonardo Academy (LEO) has had any contract/agreement cancelled or terminated.
- 7. Review of 2 CFR Part 170 This has been reviewed and will comply.
- 8. Criminal Law Violation Neither Jacintoport International, Seaboard Marine, or Leonardo Academy (LEO) has had any criminal law violations.

October 29, 2024

Ms. Allie Isbell Assistant Director of Transportation Houston-Galveston Area Council

RE: Correction to Old Conroe Road Costs (CSJ: 0912-37-231)

Dear Ms. Isbell:

This letter seeks to correct an error inadvertently made by H-GAC during programing for the 2025 Transportation Improvement Plan (TIP) Update.

It appears that when the funds for the City of Conroe's Old Conroe Road Widening & Extension Project (CSJ 0912-37-231) were programmed as part of the 2025 TIP update, H-GAC took the construction cost line item of \$192,428,175 and treated this as the total project cost, inclusive of the existing right-of-way (ROW) cost, making adjustments to both construction and ROW line items accordingly. This was not what the City had intended with the cost increase that was requested.

The purpose of the cost increase that was submitted in February of 2024 was to increase the total construction phase cost at an 80/20 match, based upon the H-GAC Cost Increase Policy. The City would like to correct the TIP listing as originally intended and to update the funding amounts for this project to be consistent with a FY28 letting date to include an 80/20 construction cost (inclusive of construction management and materials testing) and a 50/50 right-of-way cost.

Both the TIP and Statewide Transportation Improvement Program (STIP) should now demonstrate the following:

	Federal		Local	Total		
Construction	\$ 161,639,667	\$	40,409,917	\$	202,049,584	
ROW	\$ 9,550,297	\$	9,550,297	\$	19,100,594	
Totals	\$ 171,189,964	\$	49,960,214	\$	221,150,178	

Sincerely,

Greg Hall,

Assistant Director Public Works

City of Conroe

Ms. Jamila Owens Assistant Director Houston-Galveston Area Council P.O. Box 22777 Houston, TX 77227-2777

RE: City of Conroe FY 2023 5339(c) Low or No Emission Grant Program TIP Addition Request

Dear Ms. Owens:

The City of Conroe (City) respectfully requests H-GAC's consideration in granting an addition to the FY2025-2028 Transportation Improvement Program (TIP) and subsequently submitting the TIP addition to TxDOT for inclusion into State TIP. On June 26, 2023, the City of Conroe was awarded \$4.5 million. The City was awarded the Low or No Emission Grant Program and the Grants for Buses and Bus Facilities 5339(c), FTA-2023-002-TPM-LWNO, grant award.

https://www.transit.dot.gov/funding/grants/fy23-fta-bus-and-low-and-no-emission-grant-awards

The funding will be used to purchase four expansion fleet CNG Commuter Service buses for the Conroe to Houston Commuter Service. The City is currently under contract with a third-party commuter service vendor. The benefit of the grant award to the City of Conroe will be the reduction of operational costs while reducing environmental impact of the commuter service. This project will also allow the City to meet the transit and mobility needs of residents accessing employment and services in the Houston-Metro area. The City will submit an application for TDCs in to assist with the 20% local share in FY25.

FY2020 FTA 5339(b) Award Information

Project Type	<u>Fiscal</u> <u>Year</u>	Brief Project Description	<u>Federal</u>	<u>TDCs</u>	<u>Total</u>
Capital	FY 2025	5339c Lo-No Emissions Procurement of 4 each Fleet Expansion CNG Commuter			
		Buses for Conroe	\$4,500,000	900,000	\$4,500,000

If you have any questions concerning this request, please contact Ms. Shawn Davis at (936) 522-3534 or shdavis@cityofconroe.org.

Respectfully,

8hawn Davis City of Conroe

RE: Requested Amendment to MPO ID 15243 Purchase of 20 40-Foot Electric Buses and 10 Smaller "Cutaway" Electric Buses Plus Necessary Recharging Equipment

METRO requests consideration for an amendment to the 2025-2028 Transportation Improvement Program (TIP) and 2045 Regional Transportation Plan Update to modify the scope of MPO ID 15243 to replace the purchase of electric buses with the purchase of 32, 40-foot Compressed Natural Gas (CNG) buses.

METRO has successfully purchased and deployed twenty 40-foot battery electric buses under a separate federal grant award. However, delivery of these vehicles was significantly delayed, a subsequent recall of the buses due to battery issues further delayed deployment and METRO experienced a much higher cost for recharging infrastructure than originally estimated.

METRO believes electric bus manufacturing and battery technology will continue to advance, improving the reliability of future bus deliveries and performance. However, the advanced age of many METRO buses waiting for replacement requires both near term vehicle availability and proven technology.

Therefore, METRO requests rescoping of MPO ID 15243 to enable the purchase of 32 CNG fueled 40-foot buses which will result in significant reductions in both Nitrogen Oxides and Volatile Organic Compounds, the two primary precursors to Ground Level Ozone.

METRO has a long and successful history with CNG fueled buses and is expanding the capability of its bus operating facilities to fuel and service these vehicles. Please see the attached amendment details and the analysis of emissions reductions.

TIP Amendment Request

As Transportation Development Credits(TDCs) were previously award to this project. I appreciate your review and action on this request at your earliest convenience. For questions or additional information, please contact me or Bryan Carroll at 713-615-6423 or, via email, at bryan.carroll@ridemetro.org.

RE: Approved FY 2023 Section 5310 Formula Funds (Revised)

Dear Ms. Lyssy:

Per March 5, 2024 letter, the METRO Board of Directors approved the allocation of FY 2023 Section 5310 Enhanced Mobility of Seniors and Individuals with Disabilities Formula Grants for the Houston Urbanized Area on February 29, 2024. The table below is revised to identify all organizations and respective allocations:

<u>Recipient</u>	Amount	Percent
Montrose Redevelopment Authority	\$200,000	3.6%
Gulf Coast Transit District	\$287,968	5.2%
Memorial Heights Redevelopment Authority	\$421,350	7.7%
Fort Bend County	\$472,821	8.6%
East End District	\$678,105	12.3%
Harris County	\$710,225	12.9%
METRO	\$2,522,542	45.9%
East Downtown Redevelopment Authority (sub to METRO)	\$200,000	3.6%
Total	<u>\$5,</u> 493,011	100%

Each Direct Recipient agrees to the amounts allocated/reassigned and is responsible for its own application to the Federal Transit Administration to receive Section 5310 funds and assumes the responsibilities associated with any award of these funds.

Please contact Albert Lyne, Deputy Chief Strategy Officer, should you have any questions at 713-739-4637 or <u>AL21@ridemetro.org</u>.

Demonstration project for the Catalyzing Lower Emissions with Alliances and New Systems in Trucking And Community Sustainability, CLEANSTACS, to support economic development, good jobs, the environment, and benefits for our local communities

The total estimated cost of this project is \$31,381,581 with the request for 80 percent federal support of \$25,105,985 and a 20 percent local share of the total, equaling \$6,276,496.

Port Houston serves as a strategic leader for the region, responsible for ensuring the free flow of seaborne cargo in the Houston Ship Channel. In addition, to the nearly two hundred private maritime terminals along this 52-mile channel, Port Houston owns and operates eight public terminals. Collectively the port area generates nearly 3.4 million jobs and \$906 billion in total economic value to the nation. Driven by population growth. economic development, and increasing trade volumes, freight tonnage in the greater Houston area is expected to grow by 60% from 2015 to 20401,

presenting compounding challenges, including: decreasing roadway efficiencies, increasing truck traffic, and tons of greenhouse gas and criteria pollutant emissions. Over the past seven years Port Houston's eight public terminals have grown by an average annual growth rate exceeding 10%. This equates to 4 million twenty-ton equivalents units (TEU's) of cargo moving on nearly 10,000 truck visits per day and amounts to around 3 million trips per year and generates 2 billion tonmiles, or about 360,000 tons of CO2e per year, plus the criteria pollutants which contribute to unhealthy levels of ground-level ozone. The port is part of the Houston-Galveston-Brazoria (HGB) Nonattainment Area which fails to meet the national air quality standards for ground-level ozone, known to cause throat irritation, breathing difficulties, coughing, chest pain, and can be fatal.

As part of Port Houston's strategic goals, in April 2022 the Port Houston Board of Commissioners committed to achieving carbon neutrality by 2050. As its roadmap to meet this goal, the Port launched a Sustainability Action Plan with a key measure being emission reductions from trucks at and near the Port's facilities. The heavy-duty Class-8 trucks that serve as a land bridge moving cargo to and from port terminals and warehouses are called drayage trucks. Emissions from these trucks are large and growing. Addressing the challenge is complex because: 1.) the majority of drayage trucks are owner-operators and are not under the direct control of the Port, the terminals,

_

¹ Houston-Galveston Area Council (HGAC)

or the shippers who use the terminals, 2.) truck routes are not prescribed and impact economically disadvantaged communities, (see map below of Daily Truck Traffic driving in Houston's Pleasantville neighborhood²), and 3.) new technologies are expensive, lack fueling/charging stations, and are unproven for heavy-duty Class 8 trucks. To address these problems, Port Houston

is initiating a truck program, aptly called *CLEANSTACS*, for: Catalyzing Lower Emissions with Alliances and New Systems in Trucking And Community Sustainability.

The U.S. Department of Transportation, and Federal Highway Administration, have issued a Reduction of Truck Emissions at Port Facilities Grant Program (RETPF). This new discretionary grant program is aimed at funding projects that reduce port-related emissions from idling trucks.

The Port is proposing a RETPF grant to demonstrate and kick-start Port Houston's *CLEANSTACS* program to reduce emissions with both strategic and immediate impacts. This demonstration project is a four-part program to:

- 1. Introduce Zero-Emissions Port Drayage Trucks and Infrastructure, by demonstrating thirty (30) Zero-Emission Vehicle (ZEV) Class-8 drayage trucks. This will be a market-driven acquisition program, for battery electric (BE) trucks and hydrogen fuel-cell electric (HFC) Class-8 trucks. This proposal includes fifteen (15) portable electric chargers for the BE trucks and one (1) portable hydrogen fueling station for the HFC trucks. This project will also prepare preliminary site selection, including 100% design and environmental analyses for construction of a public electric charging station and a hydrogen fueling station. All aspects will be through an open call for projects to trucking companies and owner operators within the HGB Non-Attainment Area, plus ZE technology manufacturers, charging and fueling providers for fair allocation of funding.
- 2. Reduce Emissions from Existing Fleet, through the purchase of thirty (30) auxiliary power unit (APUs). In addition will conduct a traffic assessment in preparation for the traffic impacts resulting from TxDOT's reconstruction project to raise the ship channel bridge on Interstate 610 scheduled to begin 2027. This will maximize route efficiencies from the I-610 expansion, avoid the historically disadvantaged communities, and address Gate 8 traffic configuration at Clinton Drive. This assessment will reduce emissions from idling, specifically for entry and exit from the Port's Turning Basin Terminal, while complementing a planned comprehensive traffic analysis.
- 3. Implement Community Benefits Plan. will engage the historically disadvantaged communities across from the Port's Turning Basin Terminal in the traffic assessment and administer an outreach program to drivers and other stakeholders to stop cut-throughs through the

² American Truck Research Institute

neighborhoods, and educate drivers to reduce idling emissions, In addition, a workforce training program will be established to support the maintenance and repair of ZE (BE and HFC) trucks by partnering with a local community college to create and provide three mechanic training courses to continue for years after the end of this demonstration project.

4. Demonstrate Viability and Scalability by Measuring and Reporting Results. Will track and quantify the results from each of these efforts, adding to the knowledge base of ZEVs, BE and HFC, for Class-8 heavy-duty engines. The data from this project will be instrumental in demonstrating the viability of ZEVs, the distinguishing features of BEVs and HFCVs, and for the mass of heavy-duty engines operating at the Port as well as within the greater region. Given the large inventory of heavy-duty engines for on and off-road mobile sources utilized in the maritime and industrial sectors this demonstration will aid in the regional and national transition to ZEVs and ultimately support the transformation of the entire fleet. Measuring impacts will demonstrate the ability to scale up such interventions and technologies. Keeping metrics of the emission reductions, jobs development, and community benefits, will help replicate efforts for disadvantaged neighborhoods elsewhere.

Port Houston's demonstration proposal builds on the momentum already created through the Port's engagement with trucking operators, community and environmental organizations, local agencies, industry solutions, and technology providers. While this program provides stand-alone benefits, it is synergistic with other programs at the Houston-Galveston Area Council, Texas Commission on Environmental Quality, and Texas Department of Transportation for truck replacement, freight mobility, and other like efforts. This project is proposed to begin in March 2024 and complete in March 2029.

TIP Project Description

Metropolitan Transit Authority of Harris County

Purchase 32 40ft CNG buses replacing 32 diesel hybrid buses.

Federal Cost TDC Request \$29,193,000 5,838,600
Is this project currently in TIP Year

the TIP?

Yes

Priority Use of TDCs

TDC Priority

Reduction of on-road vehicle emissions.

Please explain how the use of TDCs will help meet the priority established for this project.

The proposed project will reduce over 12.8 Kg/day in Nitrogen Oxide emissions and 0.03 Kg/day in VOC emissions supporting the reginal goal of attaining federal clean air standards.

Maintenance of Local Investment

Roadway, Transit, or Other Project?

Transit Project

Explain and document the effect the TDC's will have on local and non-federal funding support for existing transit services.

These TDCs were previously programmed for the purchase of 20 forty foot and 10 cutaway electric buses which this project will replace. The use of TDCs will not reduce METRO's planned expenditure for its operations, maintenance and expansion of METRO services and facilities.

TIP Project Description	The City of Conroe is currently under contract with a third-party commuter service vendor operating a commuter service to downtown Houston and the Houston Medical Center. The commuter service consists of two morning in-bound routes to Houston and two afternoon out-bound routes to Conroe. The City of Conroe would like to purchase four CNG commuter buses to expand the transit agency fleet. The expansion vehicles would and reduce the environmental impact of the service and reduce the monthly operational costs of the service. The fleet expansion would reduce the monthly vehicle costs of the commuter service allowing for an additional commuter trip into downtown Houston and the Houston Medical Center and returning to Conroe. The City of Conroe would be able to reduce operational costs while increasing transit options for citizens wanting to commute into Houston. The commuter service ridership demand is increasing; however; local budget restraints do not allow for the commuter service to increase the frequency at the current third-party vendor contract cost. Reducing the vehicle contract cost would allow the City of Conroe to reinvest the local budget funds into increasing commuter trip frequency while reducing the environmental impact of the commuter service.
Is this project currently in the TIP?	No
Is this project currently in the RTP?	Yes
Roadway, Transit, or Other Project?	Transit Project
Transit Project Type	Capital
Explain and document the effect the TDC's will have on local and non-federal funding support for existing transit services.	The City of Conroe would be able to reduce operational costs while increasing transit options for citizens wanting to commute into Houston. The commuter service ridership demand is increasing; however, local budget restraints do not allow for the commuter service to increase the frequency at the current third-party vendor contract cost. Reducing the vehicle contract cost would allow the City of Conroe to reinvest the local budget funds into increasing commuter trip frequency while reducing the environmental impact of the commuter service.
TDC Priority	Support of Federal Transit Funding
Please explain how the use of TDCs will help meet the priority established for this project.	The City of Conroe is currently under local budget restraints and would not be able to meet the local match for the four CNG commuter service vehicles. The CNG commuter buses would reduce vehicles on the road and provide a more environmentally friendly option for commuters traveling into downtown Houston and the Houston medical center. The City of Conroe would save monthly vehicle costs written into the commuter service contract by purchasing expansion fleet vehicles for the commuter service. The TDCs would assist two-fold enabling The City of Conroe to purchase CNG fleet expansion vehicles and to reinvest the monthly vehicle contract costs into additional commuter service routes. This project will allow the City of Conroe to meet the transit and mobility needs of residents accessing employment and services in the Houston-Metro area.
Federal Cost	4500000
TDC Request	900000
Please explain the reason for the change in the TDC Request amount.	The City of Conroe is currently under local budget restraints and would not be able to meet the local match for the four CNG commuter service vehicles.

TIP Project Description	FY2023 5307 Houston Urbanized Area Formula Funds Planning, Development (\$200k) and Capital Cost of Contracting in Brazoria County (\$1m) between 07/2025 - 06/2027.
Is this project currently in the TIP?	No
Is this project currently in the RTP?	No
Roadway, Transit, or Other Project?	Transit Project
Transit Project Type	Planning
Explain and document the effect the TDC's will have on local and non-federal funding support for existing transit services.	TDC's will be used in lieu of local match funds for Gulf Coast Transit District's planning and capital expenditures. TDCs will allow GCTD to utilize 100% of their 5307 funds on transit operations so the local funds normally allocated to these projects can be used for support of public transit. With TDCs to match FY22 5307 awards, existing local funding will be used to support ongoing transit operations and enable the purchase of rolling stock. GCTD continues to provide local funding in support of public transit.
