

# Site Status Report Patrick Bayou Superfund Site Deer Park, TX Prepared by:

US Environmental Protection Agency Region 6

# **Executive Summary**

- The Patrick Bayou Superfund site is a 2.5 mile long tributary of the Houston Ship Channel located in an industrial area of Deer Park, TX, surrounded by operating petro-chemical plants and receives run-off from residential, commercial, and industrial properties in the drainage basin.
- Historical investigations have been conducted since 1993 by the TMDL group, TCEQ & others
- Superfund investigations began after the AOC was signed in 2006
- Several phases of field investigation activities (from 2006 2011) have been completed and evaluation of site risk is currently under progress.

## **Executive Summary**

- The lead agency is the US EPA; cooperatively working with TCEQ, NOAA, US Fish and Wildlife, TX GLO and TX Parks & Wildlife.
- The Respondents include Shell, Lubrizol and Occidental Chemical, who are working cooperatively with EPA, TCEQ, state and federal Trustees and who have also worked cooperatively with regulators on other TMDLrelated projects.

Oct 2006 Hydrodynamic data collection and sediment coring

<u>Nov 2008</u> Sediment mixing zone evaluation Oct 2009 Surface water & sediment COPC delineation <u>June – Oct 2011</u> Fish and shellfish sampling for Eco and Human Health Risk Assessment

Remedial Investigation Timeline 2006 - 2012

<u>Aug 2007</u> Sediment transport model data collection and pore water sampling

June 2009 Stormwater sampling & upstream source evaluation <u>Aug 2011</u> Upstream source characterization sampling

# Surrounding Land Use

- Upstream areas serve as primary storm water conveyance for City of Deer Park
- Downstream areas are bordered by industrial facilities
- The Bayou ranges from 40 to 450 feet wide

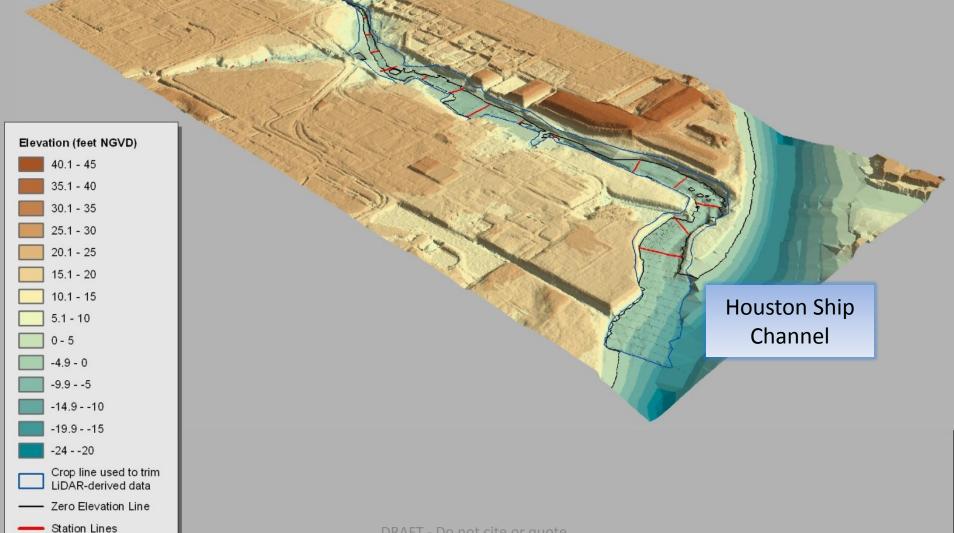

DRAFT - Do not cite or quote

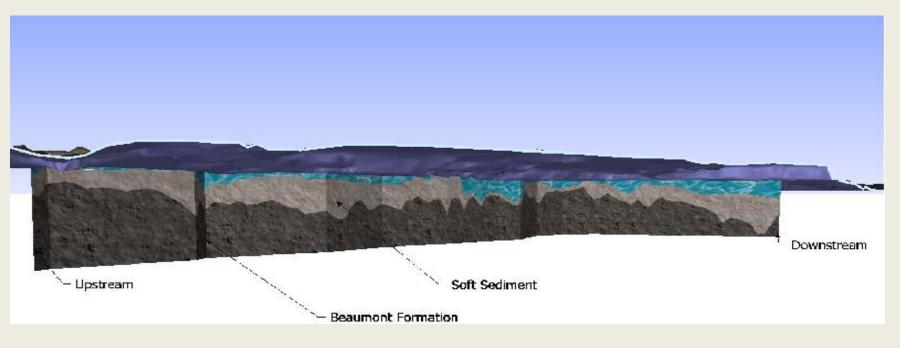

#### **Bathymetry of Bayou**

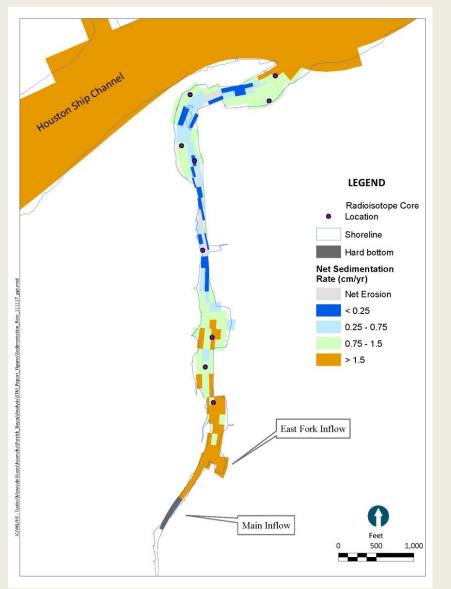

# Site Description

- Soft sediments are primarily silty sands and clays
- Soft sediment thickness generally 2 to 6 feet

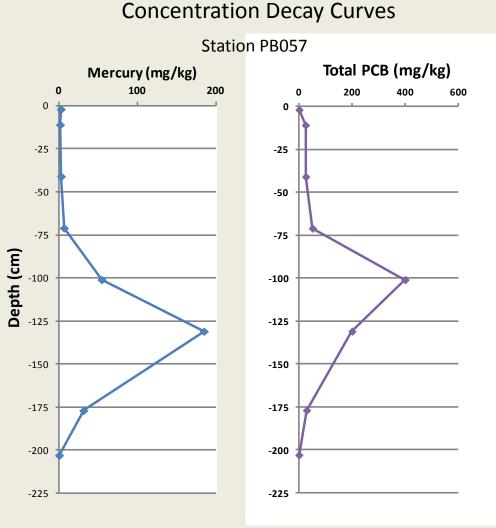

## **Sediment Deposition Rates**

- The Bayou is nearly an
  entirely depositional
  environment, reducing
  risk of exposure to
  contaminated
  sediments
- Deposition rates vary across the Bayou

# Subsurface Contaminant Levels

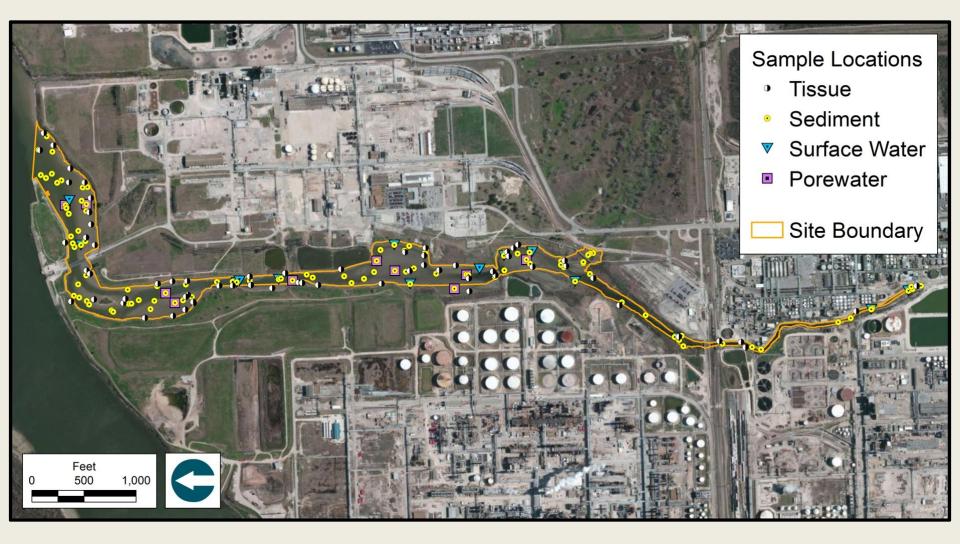

- Contamination is associated with historical discharges.
- Surface levels of contaminants are decreasing at an observable and predictable rate.

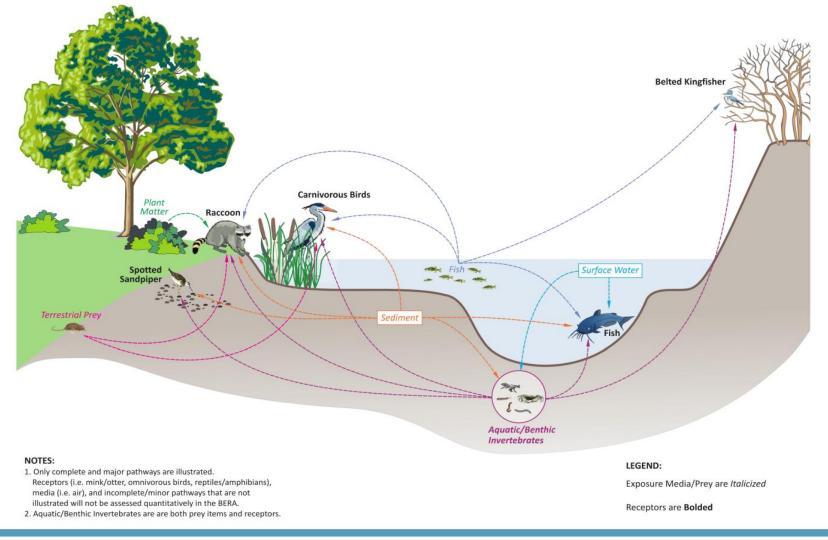

## Risk Assessment

- Contaminants of Potential Concern (COPC) have been identified for human and ecological receptors
- Assessment of current risks is in progress using sediment, surface water, and fish & shellfish tissue data collected from the site

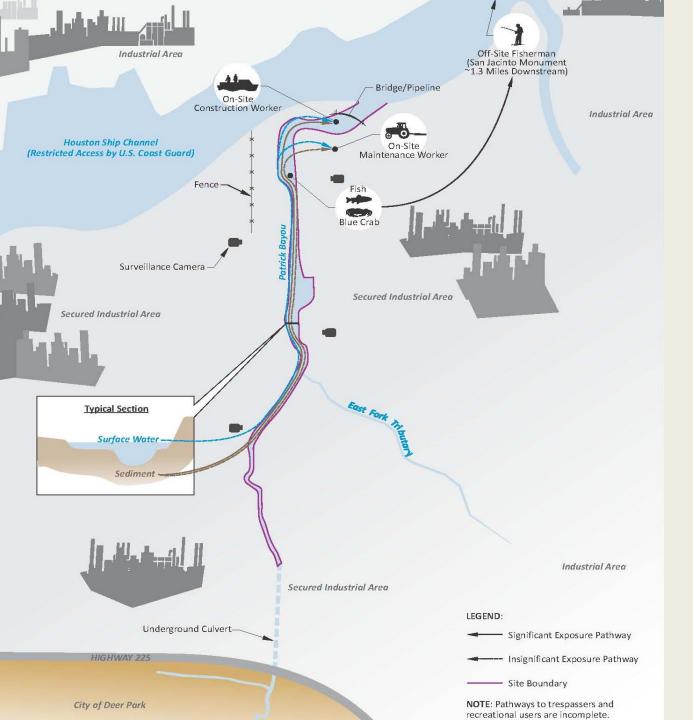

#### **Risk Assessment Sampling Locations**

#### Potential Ecological Receptors for Evaluation

Patrick Bayou Superfund Site Ecological Conceptual Site Model

Human Health Conceptual Exposure Model

# Next Steps

- Complete the evaluation phase of the remedial investigation in mid-2012
  - Draft Remedial Investigation Report
  - Draft Baseline Human Health Risk Assessment
  - Draft Baseline Ecological Risk Assessment
- Initiate Feasibility Study activities January 2012
