Appendix B: Task 3 Work Plan & Sampling Process Design and Monitoring Schedule (Plan)

Appendix B - Sampling Process Design and Monitoring Schedule (plan)

TASK 3: WATER QUALITY MONITORING

Objectives: Water quality monitoring will focus on the characterization of a variety of locations and conditions. This will include a combination of the following:

- planning and coordinating Multi-Basin monitoring;
- routine, regularly-scheduled monitoring to collect long-term information and support statewide assessment of water quality;
- systematic, regularly-scheduled short-term monitoring to screen water bodies for issues.
- permit support monitoring to provide information for setting permit effluent limits; and
- special study, intensive monitoring targeted to:
 - o identify sources and causes of pollution;
 - o assess priority water quality issues;
 - o obtain background water quality information;
 - o provide information for setting site-specific permit effluent limits; and
 - o evaluate statewide, regional, and site-specific water quality standards.

Task Description:

The Performing Party will coordinate and develop water quality monitoring strategies through the Regional Monitoring Workgroup (RMW). The RMW will meet during three of four quarters to discuss monitoring needs, problems, successes and changes. The fourth quarter meeting is conducted as the Coordinated Monitoring Meeting (see below). The RMW is composed of H-GAC CRP staff and representatives from local participating agencies, currently including Harris County Pollution Control, Environmental Institute of Houston, City of Houston-Health Department, City of Houston-Drinking Water Operations, Texas Research Institute for Environmental Studies, and the San Jacinto River Authority as well as H-GAC's contract lab and TCEQ Region 12. Meeting notices will be sent to TCEQ Austin, United States Geological Survey (USGS), Texas Parks and Wildlife, Texas Department of Health, GBEP, local universities, and other interested parties to invite input on monitoring discussions and strategies. Each agency/organization will be asked to send representatives from their field investigation staff and laboratory staff. The RMW will discuss CRP monitoring tasks and deliverables, basin monitoring priorities, training, and upcoming projects. This workgroup is designed to function as the mechanism through which data management needs and priorities are discussed. As described in Task 1, the Performing Party will include meeting summaries in the corresponding quarterly Progress Report.

RMW meeting results will be presented to the CRP Steering Committee for review and concurrence with various basin interests. This review process will be used to assess the current monitoring plan and adjust regional monitoring strategies as needed.

To avoid duplication of monitoring efforts, the Performing Party will continue to coordinate monitoring efforts with other area data providers. The Performing Party also will continue to arrange regional training opportunities and workshops which support cooperative monitoring efforts (e.g., field methods, biological data collection, and habitat assessment).

The Performing Party will complete the following subtasks:

In FY2020, the Performing Party will collect quarterly samples at 20 water quality monitoring sites throughout the H-GAC service area. Sampling efforts will include basic field parameters, flow, conventional chemical parameters, and bacteria. Most sites are located in the upper portions of watersheds or watersheds that fall outside the jurisdiction of local partner agencies.

In addition to the Performing Party's ambient monitoring program, six local agencies are involved in this multibasin monitoring effort. The Performing Party contracts with several entities to conduct monitoring and coordinated with others as in-kind contributors. The six participating agencies typically monitor a combined total of over 300 monitoring sites in the region. Each of the agencies' monitoring activities will be coordinated through the RMW. The coordination reduces monitoring duplication and allows all local agencies to see the data collection efforts of and data availability from other local agencies. Routine monitoring is scheduled at varying frequencies, which are determined by the parameters of concern for individual streams and/or proximity to a monitoring agency's field office and lab. Frequencies vary from quarterly for some parameters to monthly in highly impacted urban areas. Baseline monitoring will include the collection of field parameters at all sites and the collection of bacteria, flow, and conventional chemical parameters at sites where indicated. Additional details concerning the monitoring activities conducted by partner agencies are outlined in the Performing Party's Multi-Basin QAPP.

In FY2021, area partners and H-GAC are expected to monitor at a similar level of effort as in FY2020. The actual number of sites, location, frequency, and parameters collected for FY2021 will be based on priorities identified at the CRP Steering Committee and Coordinated Monitoring meetings and included in the amended Appendix B schedule of the Performing Party's Multi-Basin QAPP.

All monitoring will be completed in accordance with the H-GAC QAPP, the TCEQ Surface Water Quality Monitoring Procedures, Volume 1: Physical and Chemical Monitoring Methods (RG-415) and the TCEQ Surface Water Quality Monitoring Procedures, Volume 2: Methods for Collecting and Analyzing Biological Assemblage and Habitat Data (RG-416). The Performing Party will include summaries of monitoring activities in the corresponding quarterly Progress Report.

Special studies are developed, as needed, based on local stakeholder input and the results of TCEQ or the Performing Party assessments.

24-Hour Dissolved Oxygen Monitoring - There are priority sub-segments with dissolved oxygen impairments or concerns in the Performing Party's monitoring area. More data collection is needed to determine or verify impairment. The Performing Party will conduct 24-hour dissolved oxygen monitoring at a minimum of two stations, four times per year, throughout the two-year contract period. The sites will be determined once budget is approved and site locations are coordinated and prioritized with TCEQ. The Performing Party will also include summaries of monitoring events in the corresponding quarterly Progress Report.

Permit Support Monitoring — During FY2020 and/or FY2021, the Performing Party <u>may</u> conduct monitoring activities to support TCEQ's Water Quality Division by collecting field parameters and discharge measurements at selected waterbodies identified by TCEQ. The sites will be determined once budget is approved and site locations are coordinated and prioritized with TCEQ. The Performing Party will include summaries of any activities in the corresponding quarterly Progress Report.

Coordinated Monitoring Meeting - The Performing Party will hold an annual coordinated monitoring meeting as described in the FY2020-2021 CRP Guidance in lieu of the spring RMW meeting. Qualified monitoring organizations will be invited to attend the working meeting in which monitoring needs and purposes will be discussed segment by segment and station by station. Information from participants and stakeholders will be used to select stations and parameters that will enhance overall water quality monitoring coverage, eliminate duplication of effort, and address basin priorities. A summary of the changes to the monitoring schedule will be provided to the participants within two weeks of the meeting. Changes to the monitoring schedule will be entered into the statewide Coordinated Monitoring Schedule (http://cms.lcra.org) and communicated to meeting attendees. Changes to monitoring schedules that occur during the year will be entered into the Coordinated Monitoring Schedule and communicated to meeting attendees.

Progress Report - Each Progress Report (Task 1) will include all types of monitoring and indicate the number of sampling events and the types of monitoring conducted in the quarter.

Special Studies - Status reports of each special study (if conducted) will describe activities during the

quarter. The status reports will be submitted along with the Progress Report. To help keep the public and basin stakeholders informed, the Performing Party's Web site will be updated in a timely manner to include key elements of Special Studies' Reports or Summaries (e.g., status reports, executive summary, maps, data analysis).

Site Characterizations - Review of local monitoring data indicates there are many sites throughout the region where elevated levels of bacteria or low levels of dissolved oxygen are chronic conditions. Local entities have expressed interest in determining why these chronic conditions exist. Beginning with some of the most problematic sites, the Performing Party and other CRP partners <u>may</u> conduct 'site specific' characterizations at future locations if data analysis determines a need. Habitat information, field verification of land cover, and identification of potential sources of pollution will be collected. Additional monitoring will be collected from these small sub-watersheds as needed to supply data to support TCEQ's assessment process. Data collected during these intensive surveys will be submitted to TCEQ. The Performing Party will also include summaries of any activities in the corresponding quarterly Progress Report.

A short report of approximately one to five pages in length along with photographs will be submitted following completion of each characterization assessment. The reports will be submitted to the TCEQ to assist with determining the appropriate water quality strategies to be pursued. An appendix to the Multi-Basin QAPP will be developed to provide the details of these special studies.

Deliverables and Dues Dates:

September 1, 2019 through August 31, 2020

- A. Conduct water quality monitoring, summarize activities, and submit with Progress Report December 15, 2019; March 15 and June 15, 2020
- B. Coordinated Monitoring Meeting between March 15 and April 30, 2020
- C. Coordinated Monitoring Meeting Summary of Changes within 2 weeks of the meeting
- D. Email notification that Coordinated Monitoring Schedule updates are complete May 31, 2020
- E. Special Study Status Reports (if applicable) December 15, 2019; March 15 and June 15, 2020
- F. Site Characterization Reports (if applicable) coordinate due date(s) with TCEQ CRP Project Manager

September 1, 2020 through August 31, 2021

- A. Conduct water quality monitoring, summarize activities, and submit with Progress Report September 15 and December 15, 2020; March 15 and June 15 and August 31, 2021
- B. Coordinated Monitoring Meeting between March 15 and April 30, 2021
- C. Coordinated Monitoring Meeting Summary of Changes within 2 weeks of the meeting
- D. Email notification that Coordinated Monitoring Schedule updates are complete May 31, 2021
- E. Special Study Status Reports (if applicable) September 15 and December 15, 2020; March 15 and June 15 and August 31, 2021
- F. Site Characterization Reports (if applicable) coordinate due date(s) with TCEQ CRP Project Manage

Sample Design Rationale FY 2020

The sample design is based on the legislative intent of CRP. Under the legislation, the Basin Planning Agencies have been tasked with providing data to characterize water quality conditions in support of the Texas Water Quality Integrated Report, and to identify significant long-term water quality trends. Based on Steering Committee input, achievable water quality objectives and priorities and the identification of water quality issues are used to develop work plans which are in accord with available resources. As part of the Steering Committee process, the H-GAC coordinates closely with the TCEQ and other participants to ensure a comprehensive water monitoring strategy within the watershed. A discussion of past or ongoing water quality issues should be provided here to justify the monitoring schedule.

<u>City of Houston Health Department</u> (HHD) All 133 monitoring sites will have the frequency of monitoring reduced from nine times per year to six times per year.

HHD also agreed to add 'Nitrite as N' to all the sites where they collect TKN to complete the nutrient suite.

The local partner presented a list of sites that are very shallow and difficult to sample. All of these sites are also part of the Bacteria Implementation Group (BIG) data pool so monitoring will be reduced to field parameters and bacteria only. A final decision regarding all the shallow sites is as follows:

Action	Site ID	Site Description	Monitoring Effort
REDUCE	16662	Big Gulch at Wallisville Rd in East Houston	collect field parameters and bacteria samples only
REDUCE	16667	Unnamed tributary of Halls Bayou at Woodlyn Rd in Northeast Houston	collect field parameters and bacteria samples only
REDUCE	16652	Willow Waterhole at McDermed Dr in Southwest Houston	collect field parameters and bacteria samples only
REDUCE	16656	Sims Bayou South Branch at Tiffany Dr in South Houston	collect field parameters and bacteria samples only
REDUCE	16657	Unnamed tributary iof Hunting Bayou at John Ralston Rd in East Houston	collect field parameters and bacteria samples only
REDUCE	18689	Unnamed tributary of Hunting Bayou at Minden St approximately 033 KM East of Lockwood and South of North 610 Loop East	collect field parameters and bacteria samples only
REDUCE	18690	Bintliff Ditch Tributary of Brays Bayou under center of Bissonnet St. bridge 317 meters NE of Bissonnet at Fondren Rd in SW Houston	collect field parameters and bacteria samples only
REDUCE	18691	Mimosa Ditch Trubutary of Brays Bayou at NewCastle Dr in Southwest Houston	collect field parameters and bacteria samples only
REDUCE	18692	Poor Farm Ditch Tributary of Brays Bayou at Eastbound nnorth Braeswood Blvd approximately 200 meters east of Buffalo Speedway in SW Houston	collect field parameters and bacteria samples only
REDUCE	17483	Turkey Creek immediately southeast of Tanner Rd and North Eldridge Parkway intersection in Houston	collect field parameters and bacteria samples only
REDUCE	11157	Rolling Fork Creek at Lake Lane	collect field parameters and bacteria samples only
REDUCE	16594	Brickhouse Gully at US 290 just north of intersection of Saxon Dr in NW Houston	collect field parameters and bacteria samples only; report USGS gage flow
REDUCE	17487	Willow Spring at Bandridge Rd in southeast	collect field parameters and

		Houston	bacteria samples only
REDUCE	16666	Unnamed Tributary of Halls Bayou at Dalton	collect field parameters and bacteria samples only
DROP	11314	Spring Creek at Hwy 249	Collect field parameters, conventional parameters, and bacteria samples
ADD	11315	Spring Creek 1.13 km upstream of SH 249 near Dragonfly Rd in Spring Creek Park	Collect field, conventional, and bacteria samples
ADD	22169	Turkey Creek at Clay Rd.	Collect field, conventional, and bacteria samples
DROP	15847	Turkey Creek immediately downstream of Memorial Drive in West Houston	Moved monitoring effort

If HHD changes their monitoring from what is in this QAPP, then an amendment would be needed.

Environmental Institute of Houston (EIH).

Added 'Nitrite as N' parameter to all sites to complete the nutrient suite.

Action	Site ID	Site Description	Monitoring Effort
DROP	16476	Jarbo Bayou at	FO is taking site
DROP	16485	Jarbo Bayou at	FO is taking site
ADD	22187	Armand Bayou	Collect field parameters, conventional parameters, and bacteria samples
CONTINUE	11491	Oyster Creek at Sims Road near Holiday Lakes	Monthly flow monitoring and field parameters
ADD	11490	Oyster Creek at Hwy 35	24-hour DO
ADD	11493	Oyster Creek at FM1462	Monthly flow monitoring and field parameters; 24-hour DO

San Jacinto River Authority (SJRA) No changes were made to the monitoring sites or frequency. Agreed to add 'Nitrite as N' parameter to all sites to complete the nutrient suite for The Woodland samples. Will add 'Nitrite+Nitrate' to all Lake Conroe sites.

Texas Research Institute for Environmental Studies (TRIES) No changes were made to the monitoring sites, frequency or parameters list except for site 11236. When that stream location at FM 2090 is unwadeable, TRIES will collect field parameters, water samples, and report a flow severity only.

<u>Harris County Pollution Control Division</u> (HC) No changes were made to the monitoring sites, frequency or parameters list.

<u>City of Houston Drinking Water Operations</u> (DWO) No changes were made to the monitoring sites or frequency. Will add 'Nitrite+Nitrate' to the parameter list for both watershed and Lake Houston sites.

<u>H-GAC</u> (HG) No changes were made to routine monitoring sites for FY2020.

Action	Site ID	Site Description	Monitoring Effort
CONTINUE	11181	Crystal Creek at FM 1314 southeast of	Monthly flow monitoring and
		Conroe	field parameters
CONTINUE	16626	Stewarts Creek at SH Loop 336	Monthly flow monitoring and

			field parameters
CONTINUE	11243	West Fork San Jacinto River immediately	Monthly flow monitoring and
		upstream of SH 242	field parameters
CONTINUE	21965	Spring Branch at Shakey Hollow Rd.	24-hour DO monitoring in addition to field, flow, conventionals, and bacteria
DROP	21957	Mill Creek at FM149	Discontinue 24-hour only; Continue collecting field, flow, conventionals, and bacteria

Site Selection Criteria

This data collection effort involves monitoring routine water quality using procedures that are consistent with the TCEQ SWQM program. Some general guidelines are followed when selecting sampling sites, as outlined below, and discussed thoroughly in SWQM Procedures, Volumes I and II. Overall consideration is given to accessibility and safety. All monitoring activities have been developed in coordination with the CRP Steering Committee and with the TCEQ. The site selection criteria specified are those the TCEQ would like considered to produce data which is complementary to that collected by the state and which may be used in assessments, etc.

- 1. Locate stream sites so that samples can be safely collected from the centroid of flow. Centroid is defined as the midpoint of that portion of stream width which contains 50 percent of the total flow. If multiple potential sites on a stream segment are appropriate for monitoring, choose one that would best represent the water body, and not a site that displays unusual conditions or contaminant source(s). Avoid backwater areas or eddies when selecting a stream site.
- 2. At a minimum for reservoirs, locate sites near the dam (reservoirs) and in the major arms. Larger reservoirs might also include stations in the middle and upper (riverine) areas. Select sites that best represent the water body by avoiding coves and back water areas. A single monitoring site is considered representative of 25 percent of the total reservoir acres, but not more than 5,120 acres.
- 3. Monitoring sites are selected to maximize stream coverage or basin coverage. Very long segments may require more stations. As a rule of thumb, stream segments between 25 and 50 miles long require two stations, and longer than 50 miles require three or more depending on the existence of areas with significantly different sources of contamination or potential water quality concerns. Major hydrological features, such as the confluence of a major tributary or an instream dam, may also limit the spatial extent of an assessment based on one station.
- 4. Because historical water quality data can be very useful in assessing use attainment or impairment, it may be best to use sites that are on current or past monitoring schedules.
- 5. All classified segments (including reservoirs) should have at least one Monitoring site that adequately characterizes the water body, and monitoring should be coordinated with the TCEQ or other qualified monitoring entities reporting routine data to TCEQ.
- 6. Monitoring sites may be selected to bracket sources of pollution, influence of tributaries, changes in land uses, and hydrological modifications.
- 7. Sites should be accessible. When possible, stream sites should have a USGS or IBWC stream flow gauge. If not, it should be possible to conduct flow measurement during routine visits.

Monitoring Sites for FY 2020

The sample design for SWQM is shown in Table B1.1 in the attached EXCEL spreadsheet.
