<sup>1</sup> These future year RFG property estimates (produced by TTI, August 2020) are based on the latest available (2019) summer season Houston RFG sample data set from the EPA's RFG compliance program, with the average sulfur level adjusted to match the federal Tier 3 average annual standard (the expected level for future years). For future year diesel the sulfur level was set for consistency with the federal standard (within the average annual 15 ppm ultra-low sulfur diesel standard), at the maximum level of the last three TCEQ statewide diesel sulfur surveys (2011, 2014, 2017).

<sup>2</sup> Fuel subtype IDs 12 and 20 are 10% ethanol-blend gasoline (in this case RFG), and conventional diesel, respectively.
