

**CR 220 Improvements from SH 288 to TGC Regional Airport**  
**Preventative Activities**

The proposed project has the following preventative activities:

- Reconstruct at a higher elevation to avoid potential flooding.
- Add cross culverts and roadside detention to ensure the elevated CR 220B and CR 220 does not create flooding of surrounding areas.
- Reconstruction roadways with concrete instead of asphalt. Asphalt deteriorates when exposed to flood. Concrete will function better than asphalt in this environment.
