FM 1092

ACCESS MANAGEMENT STUDY

December 2013

FM 1092 ACCESS MANAGEMENT STUDY STAKEHOLDERS AND STUDY GOALS

FM 1092 is the main north-south corridor through the City of Stafford connecting US 59 (recently designated I-69) and the City of Houston on the north to the City of Missouri City to the south. The study area corridor, also known to many people in the region as Murphy Road, can be seen in Figure ES.1. The study area includes the right-of-way for FM 1092, major intersections, and also considers access to major facilities and destinations along the corridor.

The FM 1092 corridor plays two primary roles in the City of Stafford and the region. First, it is the primary connection for many north-south trips through Stafford connecting SH 6 and Missouri City on the south with major regional roadways such as US 90A and US 59. Its role is particularly important as there are limited alternative north-south corridors in eastern Fort Bend County. Safety along the corridor is a concern as, currently, the corridor experiences a high rate of crashes versus similar corridors across the State of Texas. To the north of the corridor is the West Bellfort Park & Ride which provides strong commuter and local bus connections as well as access to the HOV/HOT lane system on US 59.

Secondly, the FM 1092 corridor also represents the economic core of the City of Stafford. Travelling the full length of the city, the corridor is home to many businesses and potential development sites and a significant share of the city's tax base. Key destinations along the corridor include the Stafford Centre, the nearby Houston Community College campus, the Island District along US 90A, and the Texas Instruments campus site.

The FM 1092 Access Management Study has been developed to help define a vision for the corridor to support and balance these two objectives as traffic volumes grow and the corridor continues to redevelop.

The FM 1092 Access Management Study was sponsored by the City of Stafford and the Houston-Galveston Area Council (H-GAC). The study team developed the recommendations outlined in the study through extensive input from the public and business owners along the corridor. Input was gathered through a series of outreach events and public meetings (Chapter 2 of this report). A steering committee guided the study development and was made up of constituents who have an interest in the long term success of the corridor. The steering committee included representatives from:

- Houston - Galveston Area Council
- City of Stafford Public Works
- City of Stafford Fire Department
- City of Stafford Police Department
- Stafford Municipal School District
- Stafford Economic Development Council
- Texas Department of Transportation
- City of Houston
- City of Missouri City
- METRO
- Fort Bend Chamber of Commerce
- Houston Community College System

The Steering Committee developed three major goals for the study as a framework for the recommendations for the corridor.

- Improve FM 1092 Corridor Mobility
- Address Safety Issues
- Enhance Economic Development Opportunities

These goals were developed to balance the objectives for the corridor to move people traveling in all modes efficiently and safely while enhancing FM 1092 as the economic "Main Street" for the City of Stafford.

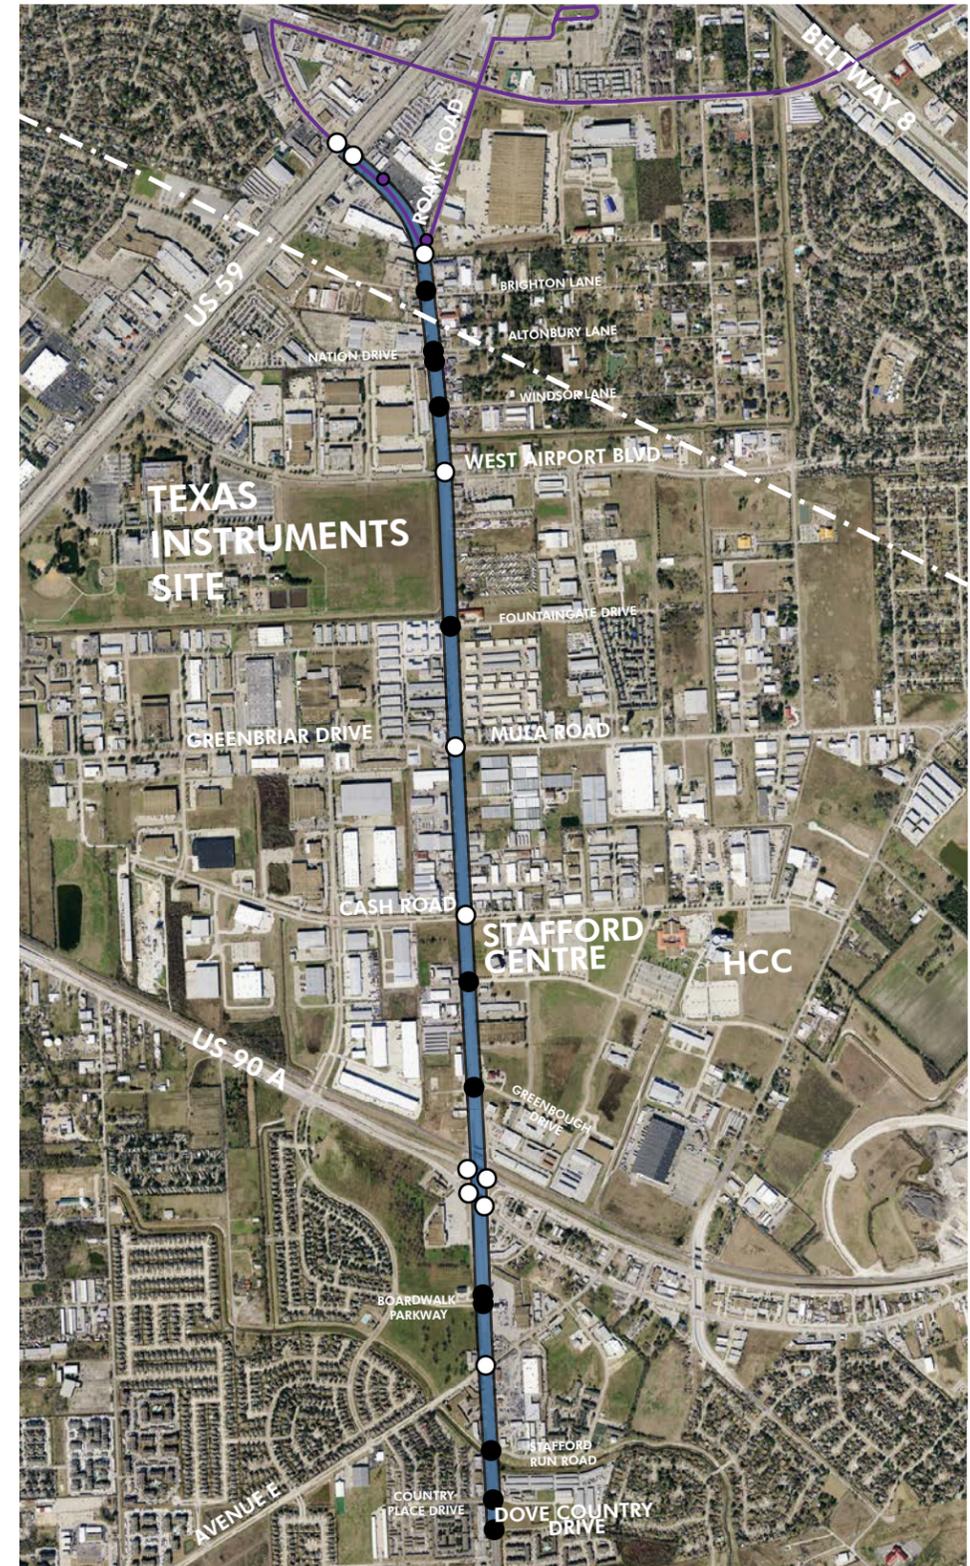

Figure ES.1 - FM 1092 Study Corridor

STUDY RECOMMENDATIONS

Based on an analysis of existing conditions along the corridor and comparing with the goals established by the Steering Committee, a set of recommendations were developed. The existing conditions assessment looked at critical issues including traffic operations and delay, pedestrian and cyclist mobility, safety metrics including crash rates and causes, and overall economic performance data such as land values and sales tax rates.

Based on this detailed assessment, which is detailed in Chapter 3 of this report, recommendations were developed that address the overall corridor, key intersections, streetscape elements and economic development opportunities focused around key opportunity nodes.

The current cross-section for most of the FM 1092 corridor is shown in Figure ES.2. The roadway is seven lanes with three travel lanes in each direction and a center turn lane. No sidewalks exist along the majority of the corridor. The proposed cross-section for the corridor, shown in Figure ES.3, was developed to utilize the existing right-of-way and pavement section as efficiently possible to achieve the desired benefits and minimize implementation costs. The proposed cross-section maintains three travel lanes in each direction but also provides a center median with turn lanes at major roadways and driveways to provide access to adjacent developments. 11' travel lanes allow the inclusion of a bike lane in each direction of travel. Sidewalks were proposed for the length of the project, a top concern of area residents.

A more detailed set of recommendations with associated planning level cost estimates are shown in Table ES.1 on the following page. Each of these recommendations is detailed in Chapter 5 of this report.

		HIGH	\$ 8,735,480	\$ 3,978,120	\$ 600,000	\$ 13,313,600 ¹⁰

¹ Includes other entities within the City of Stafford not yet determined, e.g.: improvement districts, local businesses, other management entities

² Other entities outside the City of Stafford, e.g.: Brays Oaks Management District, International Management District

³ For trees, depending on size, at a 25 to 100 foot spacing. Special pavers are an alternative to vegetation landscaping that can reduce maintenance costs.

⁴ For trees, depending on size, at a spacing of 25 to 100 feet

⁵ Dependent on phasing of implementation prioritized by activity centers and fixture type and spacing

⁶ Dependent on fixture type and a spacing of 120 to 150 feet

⁷ Cost to be based on final design of future long term project

⁸ Cost is estimated based on a 9,000 square foot plaza on the southeast corner of FM 1092 at Cash Rd

⁶ Cost estimate considers the addition of a trail, irrigation and street trees along the drainage corridor at the Texas Instruments Site

¹⁰ Does not include Project 15 - 2035 RTP Updated Project 13641

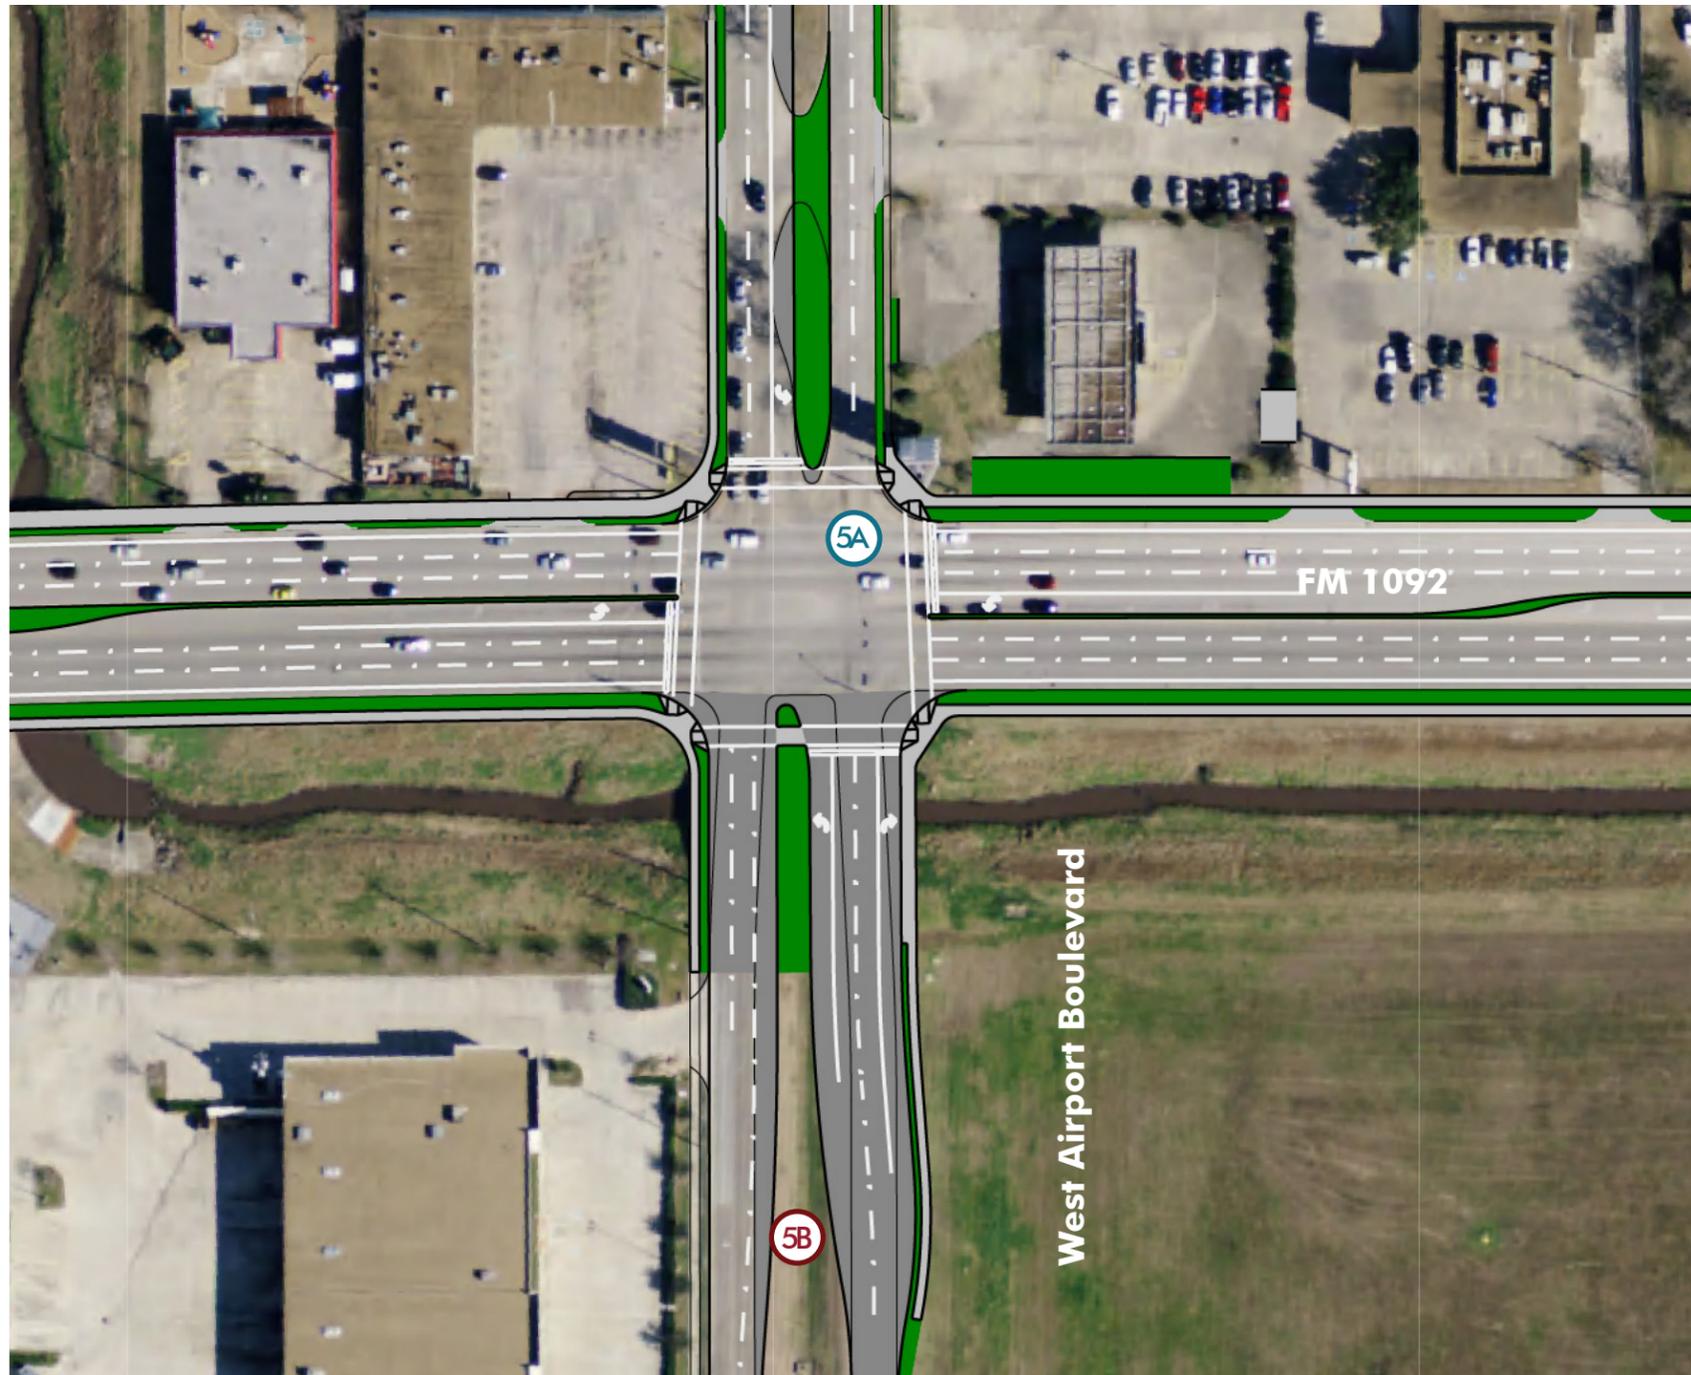

Figure ES.4: Recommendations for FM 1092 at West Airport Boulevard

Recommendations were developed to a schematic design level, to assess the feasibility and identify any potential challenges or opportunities that would arise from the proposed recommendations. An example of this is shown in Figure ES.4 which shows the proposed conditions for the intersection of FM 1092 at West Airport Boulevard. The addition of left turns at the intersection were recommended to improve the signal operations and improve the overall level of service for vehicles. Improved pedestrian and bicycle facilities are also recommended.

The recommendations outlined in Table ES.1 summarize an implementation approach that defines a clear path forward in terms of project phasing based on a prioritized timeline. The timeline was established based on 1) project cost, 2) likely ease of implementation and 3) ability to satisfy project goals. The timeline is an estimate and individual projects may be accelerated by increased focus and availability of funding.

In addition to the recommendations outlined for the corridor, the report also identifies regional improvements, such as improvements in regional roadway connectivity, potential bicycle opportunities, and stronger transit connections that round out the toolbox of transportation choices to improve mobility for travellers along the corridor and in the study area.

The implementation of the recommendations outlined in this report will require strong partnership among the various stakeholders, both public and private, with interests along the corridor. While the infrastructure improvements outlined here may be accomplished through partnerships of public agencies such as the City of Stafford, the City of Houston, TxDOT and H-GAC, to fully achieve the vision for the corridor outlined by the goals set forth by the project steering committee, a more holistic approach will be required. The redevelopment adjacent to the corridor should be coordinated with the investments in infrastructure that these recommendations outline to maximize the potential benefits to the community and the region.

Chapter 6 of this report outlines implementation strategies including economic development tools, potential partnerships, and approaches to redefine key development nodes along the corridor. By coordinating the recommendation with planning efforts such as the development of an updated Comprehensive Plan for the City of Stafford, supporting a regulatory environment aligned with the communities goals, and working with property owners and developers along the corridor, FM 1092 can continue to be the true “Main Street” for the City of Stafford while providing safer, more efficient connectivity and mobility for the region.

FM 1092 AT WEST AIRPORT BOULEVARD

Case for Action

Operations

The intersection of FM 1092 at West Airport Boulevard operates at a LOS of C during the AM Peak and LOS D during the PM peak period. While the LOS values are classified as acceptable, the intersection could operate more efficiently if the existing split phase operations on West Airport Boulevard were removed. Currently, the West Airport Boulevard approaches operate as a split phase as the approach lane geometry is limited by the bridge over the drainage canal.

The existing bridges on the eastbound approach also limit the turning radius for large trucks with a long wheel base wishing to turn from southbound FM 1092 to westbound West Airport Boulevard. Widening the intersection will help reduce issues with large trucks turning at the intersection.

Safety

The intersection of FM 1092 at West Airport Boulevard has the highest crash rate along the study corridor with 63 crashes occurring at or near the intersection between 2009 and 2011. The addition of turn lanes can reduce the read-end crashes at the intersection.

The intersection has no pedestrian infrastructure, making the intersection difficult to traverse for pedestrians.

Top Manner of Crash classifications:

- Rear-End - 54%
- Other - 18%

Top contributing factors for collisions:

- Failed to Control Speed - 57%
- Driver Inattention - 11%
- Disregard stop sign or light - 11%

Recommended Improvements

Short Term

PROJECT #5A - Install crosswalks on all four approaches as well as wheelchair ramps and pedestrian signals.

Estimated Cost: \$33,400

Long Term

PROJECT #5B - Intersection upgrades including the installation of eastbound left-turn lane and right-turn lane, additional downstream lane from the westbound approach, extension of westbound left-turn lane, and signal timings to remove split phasing for West Airport Boulevard approaches. Includes the widening of West Airport Boulevard bridge with bridge culverts.

Estimated Cost: \$1,225,500

	A.M. Peak Hour			P.M. Peak Hour		
	LOS	Delay (seconds/vehicle)	v/c	LOS	Delay (seconds/vehicle)	v/c
Before	C	31.6	0.82	D	51.5	0.95
After	C	25.3	0.67	C	31.4	0.77

May 2014

Executive Summary

This report presents the summary of findings for a Traffic Impact Analysis (TIA) prepared by LJA Engineering, Inc. (LJA) for the proposed TI Tract development in Stafford, Texas. The proposed development site is bounded by US Highway 59 (US Hwy 59) and South Kirkwood Road to the West, Murphy Road to the east, West Airport Boulevard to the North, and several developments along Bluebonnet Drive to the south. This proposed development will consist of an outlet mall, restaurants, retail stores, apartments, hotels, an industrial park, office buildings, and a gas station. Construction of this development is expected to be completed in six phases. Phase 1 is expected to begin in 2015, while Phase 6 is expected to be completed in 2020. The objective of this study is to analyze the traffic impacts of each year of development on the performance of the surrounding street network and to determine mitigation measures to address any resulting deficiencies.

Access to this development will be provided via five driveways along West Airport Boulevard (Driveways 1,2,3,4 and 5), two Driveways along Murphy Road (Driveways 6 and 7), one driveway along South Kirkwood Road (Driveway 8), and two driveways along US Hwy 59 Northbound Frontage Road (Driveways 9 and 10). The study area for this TIA includes the street network determined during this project's kick off meeting with the City of Stafford. Major intersections that were analyzed in this TIA are presented in the Existing Area Conditions section of the report. Existing land uses within the study area include retail, lodging, restaurant, office, and industrial land uses. The development site currently consists of an industrial park that will be demolished in phases in correspondence to the proposed development.

Due to the nature of this development and the traffic conditions within the study area, only the weekday AM and the weekday PM peak hour periods were analyzed in this TIA. The overall proposed development is expected to add 46,246 daily vehicle trips with 3,281 vehicle trips during the AM peak hour period and 4,188 vehicle trips during the PM peak hour period. In order to evaluate the impacts of the proposed development on the surrounding street network, each year of development was analyzed without (No Build Conditions) and with (Build Conditions) the development's generated traffic.

This study includes the analysis of several intersections that are operated and maintained by the City of Stafford, and others that are operated and maintained by the Texas Department of Transportation (TxDOT). Mitigation measures for this TIA require:

1. When the LOS without development is LOS A, B, C or D, the minimum acceptable projected LOS shall be LOS D.
2. When the LOS without development is LOS E or F, the minimum acceptable projected LOS shall be equal to the LOS without development.

Left and Right Turn Lane Warrant Analyses were completed for all driveways to the proposed development. The lengths of turn bays along the street network maintained by the City of Stafford were determined to accommodate the corresponding anticipated traffic queue lengths. The lengths of turn bays along the street network maintained by TxDOT were determined in

accordance with the requirements in the Texas Department of Transportation (TxDOT) Access Management Manual. The following is a list of access management requirements at the driveways to the proposed development:

1. Construct right and left turn bays along West Airport Boulevard at Driveway 1. These right and left turn bays should each have full width of 100 feet and a 100 foot taper.
2. Construct a right turn bay along eastbound West Airport Boulevard at Driveway 2. This right turn bay should have a full width of 100 feet and a 100 foot taper.
3. Extend the existing left turn bay along westbound West Airport Boulevard at Driveway 2 to consist of a full width of 175 feet and a 100 foot taper.
4. Construct right and left turn bays along West Airport Boulevard at Driveway 3. The right turn bay should have a full width of 100 feet and a 100 foot taper, while the left turn bay should have a full width of 175 feet and a 100 foot taper.
5. Construct a left turn bay along westbound West Airport Boulevard at Driveway 4. This left turn bay should have a full width of 150 feet and a 100 foot taper.
6. Construct a left turn bay along westbound West Airport Boulevard at Driveway 5. This left turn bay should have a full width of 150 feet and a 100 foot taper.
7. Construct a right turn bay along southbound Murphy Road at Driveway 6. This right turn bay should have a full width of 375 feet and a 100 foot taper.
8. Construct right and left turn bays along South Kirkwood Road at Driveway 8. These right and left turn bays should each have a full width of 100 feet and a 100 foot taper.
9. Construct a right turn bay along US Hwy 59 Northbound Frontage Road at Driveway 9. This right turn bay should have a full width of 375 feet and a 100 foot taper.

In order to maintain acceptable operational conditions within the study street network, several roadway improvements will be required concurrently with the proposed development. The following is the list of recommendations corresponding to each year of development:

Year 2015:

1. Construct Driveways 1 through 8 each to consist of two exit lanes (One shared left/through and one right lanes) in order to prevent right turning vehicles from getting trapped behind left turning vehicles that will require more time to exit the development site.

Year 2016:

1. Construct dual left turn bays along northbound Murphy Road at its intersection with West Airport Boulevard. These left turn bays should have a full width of 645 feet and a 150 foot taper.
2. Construct eastbound left turn lane at the intersection of West Airport Boulevard and Murphy Road. This left turn lane should have a full width of 250 feet and a 100 foot taper. This improvement will be constructed by City of Stafford as part of the improvements recommended in the FM 1092 Access Management Study.
3. Reconstruct the eastbound approach of West Airport Boulevard at its intersection with Murphy Road to consist of one left turn bay (See recommendation #2 in Year 2016), two

through lanes, and one channelized right turn bay. The channelized right turn bay should have a full width of 100 feet and a 100 foot taper.

4. Change the operation of the traffic signal at West Airport Boulevard and Murphy Road from split phase operation along the eastbound and westbound approaches to protected left turns operation. This improvement will require modification of the traffic signal at this intersection and will be constructed by City of Stafford as part of the improvements recommended in the FM 1092 Access Management Study.
5. Construct a right turn bay along westbound Cash Road at its intersection with Murphy Road. This right turn bay should have a full width of 100 feet and a 100 foot taper.
6. Reconstruct the existing right turn bay along the northbound approach of US 59 Northbound Frontage Road at its intersection with West Airport Boulevard to a channelized right turn bay.
7. Reconstruct the existing right turn bay along the westbound approach of West Airport Boulevard at its intersection with US 59 Northbound Frontage Road to a channelized right turn bay. This improvement may require right-of-way acquisition.

Year 2017:

1. Reconstruct the eastbound and westbound approaches of Greenbriar Drive at Murphy Road to consist of one left turn bay, one through lane, and one shared through/right turn lane along the eastbound direction, and one left turn lane, one through lane, and one right turn bay along the westbound direction. The eastbound left turn bay should have a full width of 300 feet and a 100 foot taper. The westbound right turn bay should have a full width of 100 feet and a 100 foot taper.
2. Change the operation of the traffic signal at Greenbriar Drive and Murphy Road from split phase operation along the eastbound and westbound approaches to protected left turns operation. This improvement will require modification of the traffic signal at this intersection and will be constructed by City of Stafford as part of the improvements recommended in the FM 1092 Access Management Study.
3. Construct dual left turn bays along southbound Murphy Road at its intersection with Cash Road. These left turn bays should have a full width of 545 feet and a 150 foot taper.
4. Reconstruct the existing right turn bay along US Highway 59 Southbound Frontage Road at its intersection with West Airport Boulevard to a channelized right turn bay, and change the lane configuration along US Highway 59 Southbound Frontage Road to one channelized right turn bay, two through lanes, one shared left/through lane, one left turn bay and one U-turn bay. This improvement may require right-of-way acquisition.

Year 2018: (Mitigation Not Required)

Year 2019: (Mitigation Not Required)

Year 2020: (Mitigation Not Required)

This study assumed that traffic signal timings at all signalized intersections within the study area will be updated as needed. Several roadway recommendations listed above may require right-of-

way acquisitions along adjacent properties. These roadway improvements will require coordination between the developer, City of Stafford, TxDOT, and impacted business owners.

Several roadway improvements along Murphy Road within the study area were recommended as part of the FM 1092 Access Management Study dated December 2013. Refer to the Proposed Area Conditions Section of this report for a list of these roadway improvements. These recommendations include geometric and traffic signal improvements along the eastbound and westbound approaches of West Airport Boulevard, Greenbriar Drive, and Cash Road at Murphy Road. These proposed recommendations do not take into account the traffic generated by this proposed development, and therefore, should be updated as described in the list of recommendations above.

Several intersection movements will operate at unacceptable levels with and without the proposed development. Mitigation measures to address these deficiencies were not established in this study. This study provides mitigation measures to improve the operation of movements that will be reduced to unacceptable levels upon the construction of this proposed development.

West Airport Boulevard and Murphy Road

The intersection of West Airport Boulevard and Murphy Road is located northeast of the proposed development site. This intersection is currently signalized with protected left turns along the northbound and southbound approaches of Murphy Road and split phase along the eastbound and westbound approaches of West Airport Boulevard. The northbound and southbound approaches to this intersection each consists of three through lanes and one 150 foot left turn bay. The eastbound approach consists of one shared left/through and one shared through/right lanes. The westbound approach consists of two through lanes and one 50 foot left turn bay. **Table 5** and **Table 6** provide a summary of the MOEs at this intersection for the AM and PM peak hours, respectively.

Table 5: West Airport Boulevard @ Murphy Road Summary of MOEs - (AM Peak)

* Update signal timing

** Reconfigure intersection geometry and update signal operation

Bold text indicates LOS E or LOS F

Red highlight indicates movements that will require mitigation

Green highlight indicates mitigated movements

* The intersection of West Airport Boulevard and Murphy Road will operate at unacceptable levels during the Existing, No Build and Build Conditions. Several intersection movements will also operate at unacceptable levels with and without the proposed development in place.

The construction of the proposed development will reduce the level of operation of this intersection from a LOS E to a LOS F during the 2017 Build AM Condition. The level of operation of several movements will also be reduced from acceptable levels to unacceptable levels during several AM and PM Build Conditions. In order to mitigate these failing conditions, the reconstruction of eastbound West Airport Boulevard to consist of a left turn bay, two through lanes, and a right turn bay, as well as changing the operation of the traffic signal along the eastbound and westbound approaches from a split phase to a protected left turns will be required. The analysis for this intersection assumed that signal timings at this intersection will be updated as needed.

Improvements at the intersection of West Airport Boulevard and Murphy Road have been established as part of the FM 1092 Access Management Study dated December 2013. These improvements do not take this proposed development into account, and therefore should be updated as recommended in this TIA.

Murphy Road and Fountaingate Drive

The intersection of Murphy Road and Fountaingate Drive is located east of the proposed development site. This intersection is currently a one way stop controlled T-intersection with stop sign along the westbound approach of Fountaingate Drive. The northbound and southbound approaches of Murphy Road each consists of three through lanes and a two way left turn lane. The westbound approach of Fountaingate Drive consists of one shared left/through/right lane.

Table 40: Right and Left Turn Bay Requirements

Driveway/ Turn Bay	Right Turn Bays			Left Turn Bays	
	Storage length	Deceleration Length	Taper Length	Storage length	Taper Length
Driveway 1	100	N/A	100	100	100
Driveway 2	100	N/A	100	175	100
Driveway 3	100	N/A	100	175	100
Driveway 4	N/A	N/A	N/A	175	100
Driveway 5	N/A	N/A	N/A	175	100
Driveway 6*	30	345	100	N/A	N/A
Driveway 7	N/A	N/A	N/A	N/A	N/A
Driveway 8	100	N/A	100	100	100
Driveway 9*	30	345	100	N/A	N/A

Conclusion

This study examined the flow of traffic around the proposed TI Tract development in Stafford, Texas. This proposed development will consist of an outlet mall, restaurants, retail stores, apartments, hotels, an industrial park, office buildings, and a gas station. Construction of this development is expected to be completed in six phases. Phase 1 is expected to begin in 2015, while Phase 6 is expected to be completed in 2020. The objective of this study is to analyze the traffic impacts of each year of development on the performance of the surrounding street network and to determine mitigation measures to address any resulting deficiencies.

Planned roadway improvements within the study area include several access management improvements along Murphy Road. These improvements are presented in the FM 1092 Access Management Study dated December 2013. These improvements consist of:

1. Constructing a raised median along parts of Murphy Road with turn bays at major intersections and driveways to provide access to adjacent properties.
2. Installing crosswalks, pedestrian ramps, and pedestrian signal heads along all approaches at the intersection of Murphy Road and West Airport Boulevard.
3. Installing eastbound left and right lanes along eastbound West Airport Boulevard, and extending the westbound left turn bay along westbound West Airport Boulevard.
4. Removing the split phase traffic signal operation at the intersection of Murphy Road and West Airport Boulevard.
5. Restriping Cash Road and Greenbriar Drive as three lane roads with one lane in each direction, a two way left turn lane, and two 5 feet bicycle lanes. Improvements to the intersections of Murphy Road with Greenbriar Road and Cash Road also include updating the signal operations at these intersections to support the proposed lane geometry. These improvements also call for installing pedestrian crosswalks and signal heads along all approaches to these intersections.
6. Extending Cash Road in the west direction to intersect South Kirkwood Road.

As of the date of this study, these planned roadway improvements are unfunded and were not included as part of this study. However, these improvements were taken into consideration during the process of establishing mitigation measures to address deficiencies in the study area street network as a result of this proposed development.

In order to determine any impacts caused by the proposed development on the existing and proposed transportation network, this study examined the performance of key intersections within the study area. A 3.5 percent annualized growth rate was calculated and applied to the existing traffic volumes to determine the future No-Build Conditions. Traffic that will be generated by the proposed development was then added to the No Build Conditions to determine the Build Condition.

The intersection of West Airport Boulevard and Murphy Road will operate at unacceptable levels during the Existing, No Build and Build Conditions. Several intersection movements will also operate at unacceptable levels with and without the proposed development in place. The construction of the proposed development will reduce the level of operation of this intersection from a LOS E to a LOS F during the 2017 Build AM Condition. The level of operation of several movements will also be reduced from acceptable levels to unacceptable levels during several AM and PM Build Conditions. In order to mitigate these failing conditions, the reconstruction of eastbound West Airport Boulevard to consist of a left turn bay, two through lanes, and a right turn bay, as well as changing the operation of the traffic signal along the eastbound and westbound approaches from a split phase to a protected left turns will be required. The analysis for this intersection assumed that signal timings at this intersection will be updated as needed. Improvements at the intersection of West Airport Boulevard and Murphy Road have been established as part of the FM 1092 Access Management Study dated December 2013. These improvements do not take this proposed development into account, and therefore should be updated as recommended in this TIA.

The level of operation of the southbound left and westbound right movements at the intersection of Murphy Road and Fountaingate Drive will be reduced from acceptable levels to unacceptable levels during several Build Conditions; this is primarily due to the high volume of traffic along Murphy Road and the lack of sufficient gaps for conflicting traffic to complete their corresponding turning maneuver. This study investigated the installation of a traffic signal at this intersection, however, due to the close proximity of this intersection to other signalized intersections to the north and south, the installation of a traffic signal at this location was determined not feasible, and there are no other improvements which could be made to improve the LOS of these movements to the required mitigated levels.

The level of operation of the intersection of Murphy Road and Greenbriar Drive will be reduced from acceptable levels to unacceptable levels during several AM and PM Build Conditions. The level of operation of several movements will also be reduced from acceptable levels to unacceptable levels during several AM and PM Build Conditions. In order to mitigate these failing conditions, the reconstruction of the eastbound and westbound approaches of Greenbriar Drive at Murphy Road to consist of one left turn bay, one through lane, and one shared through/right turn lane along the eastbound direction, and one left turn lane, one through lane, and one right turn bay along the westbound direction will be required. This improvement will

also require the modification of the traffic signal operation along these approaches from split phase operation to protected left turns operation.

The construction of the proposed development will reduce the level of operation of the intersection of Murphy Road and Cash Road from acceptable levels to unacceptable levels during several AM and PM Build Conditions. The level of operation of several movements will also be reduced from acceptable levels to unacceptable levels during several AM and PM Build Conditions. In order to mitigate these failing conditions, the construction of a right turn bay along westbound Cash Road will be required in year 2016, and the construction of dual left turn bays along southbound Murphy Road will be required in 2017.

The construction of the proposed development will reduce the level of operation of the intersection of South Kirkwood Road and Greenbriar Drive to levels that will require mitigation during several AM Build Conditions. The westbound left and the southbound through movements will also be reduced to unacceptable levels during several PM Build Conditions. These failing conditions are primarily due to the high volume of traffic at this intersection. This study investigated the installation of a traffic signal at this intersection, however, due to the close proximity of this intersection to other signalized intersections to the north and south, the installation of a traffic signal at this location was determined not feasible, and there are no other improvements which could be made to improve the LOS of these movements to the required mitigated levels.

The construction of the proposed development will reduce the level of operation of the east and west intersections at US 59 Frontage Roads and West Airport Boulevard to levels that require mitigation during several AM and PM Build Conditions. The level of operation of several movements at both intersections will also require mitigation during several AM and PM Build Conditions. In order to feasibly mitigate these failing conditions, the construction of a westbound and a northbound channelized right turn bays will be required at the east intersection during the 2016 Build Conditions, the construction of a southbound channelized right turn bay will be required at the west intersection during the 2017 Build Conditions, and updating the signal timings during the 2016 through 2020 Build Conditions will be required at both intersections.

The operation of other signalized intersections within the study area will be reduced during several Build Conditions to levels that will require mitigation. In order to feasibly mitigate the operation of these signals, updating the signal timings will be required as discussed in the intersection Capacity Analysis section of this report.

Left and Right Turn Lane Warrant Analyses were performed to analyze the need for left and right turn bays at all driveways to the proposed development in accordance with the City of Stafford and the Texas Department of Transportation (TxDOT) Access Management Manual requirements. The results of the Left Turn Lane Warrant Analysis indicated that left turn bays will be required at Driveway 1, Driveway 3, Driveway 4, Driveway 5, and Driveway 8. Northbound left turns along Murphy Road into Driveway 6 and Driveway 7 will utilize the existing two way left turn lane. Driveway 9 and Driveway 10 will be located along US 59 Northbound Frontage Road and therefore, left turning movement is not possible at these

driveways. The results of the Right Turn Lane Warrant Analysis indicated that right turn bays will be required at all driveways to the proposed development except for Driveway, 4 Driveway 5, and Driveway 7.

Recommendations

In order to maintain acceptable operational conditions within the study street network, several roadway improvements will be required concurrently with the proposed development. The following is the list of recommendations corresponding to each year of development:

Year 2015:

1. Construct Driveways 1 through 8 each to consist of two exit lanes (One shared left/through and one right lanes) in order to prevent right turning vehicles from getting trapped behind left turning vehicles that will require more time to exit the development site.

Year 2016:

1. Construct dual left turn bays along northbound Murphy Road at its intersection with West Airport Boulevard. These left turn bays should have a full width of 645 feet and a 150 foot taper.
2. Construct eastbound left turn lane at the intersection of West Airport Boulevard and Murphy Road. This left turn lane should have a full width of 250 feet and a 100 foot taper. This improvement will be constructed by City of Stafford as part of the improvements recommended in the FM 1092 Access Management Study.
3. Reconstruct the eastbound approach of West Airport Boulevard at its intersection with Murphy Road to consist of one left turn bay (See recommendation #2 in Year 2016), two through lanes, and one channelized right turn bay. The channelized right turn bay should have a full width of 100 feet and a 100 foot taper.
4. Change the operation of the traffic signal at West Airport Boulevard and Murphy Road from split phase operation along the eastbound and westbound approaches to protected left turns operation. This improvement will require modification of the traffic signal at this intersection and will be constructed by City of Stafford as part of the improvements recommended in the FM 1092 Access Management Study.
5. Construct a right turn bay along westbound Cash Road at its intersection with Murphy Road. This right turn bay should have a full width of 100 feet and a 100 foot taper.
6. Reconstruct the existing right turn bay along the northbound approach of US 59 Northbound Frontage Road at its intersection with West Airport Boulevard to a channelized right turn bay.
7. Reconstruct the existing right turn bay along the westbound approach of West Airport Boulevard at its intersection with US 59 Northbound Frontage Road to a channelized right turn bay. This improvement may require right-of-way acquisition.

Year 2017:

1. Reconstruct the eastbound and westbound approaches of Greenbriar Drive at Murphy Road to consist of one left turn bay, one through lane, and one shared through/right turn lane along the eastbound direction, and one left turn lane, one through lane, and one right turn bay along the westbound direction. The eastbound left turn bay should have a full width of 300 feet and a 100 foot taper. The westbound right turn bay should have a full width of 100 feet and a 100 foot taper.
2. Change the operation of the traffic signal at Greenbriar Drive and Murphy Road from split phase operation along the eastbound and westbound approaches to protected left turns operation. This improvement will require modification of the traffic signal at this intersection and will be constructed by City of Stafford as part of the improvements recommended in the FM 1092 Access Management Study.
3. Construct dual left turn bays along southbound Murphy Road at its intersection with Cash Road. These left turn bays should have a full width of 545 feet and a 150 foot taper.
4. Reconstruct the existing right turn bay along US Highway 59 Southbound Frontage Road at its intersection with West Airport Boulevard to a channelized right turn bay, and change the lane configuration along US Highway 59 Southbound Frontage Road to one channelized right turn bay, two through lanes, one shared left/through lane, one left turn bay and one U-turn bay. This improvement may require right-of-way acquisition.

Year 2018: (Mitigation Not Required)

Year 2019: (Mitigation Not Required)

Year 2020: (Mitigation Not Required)

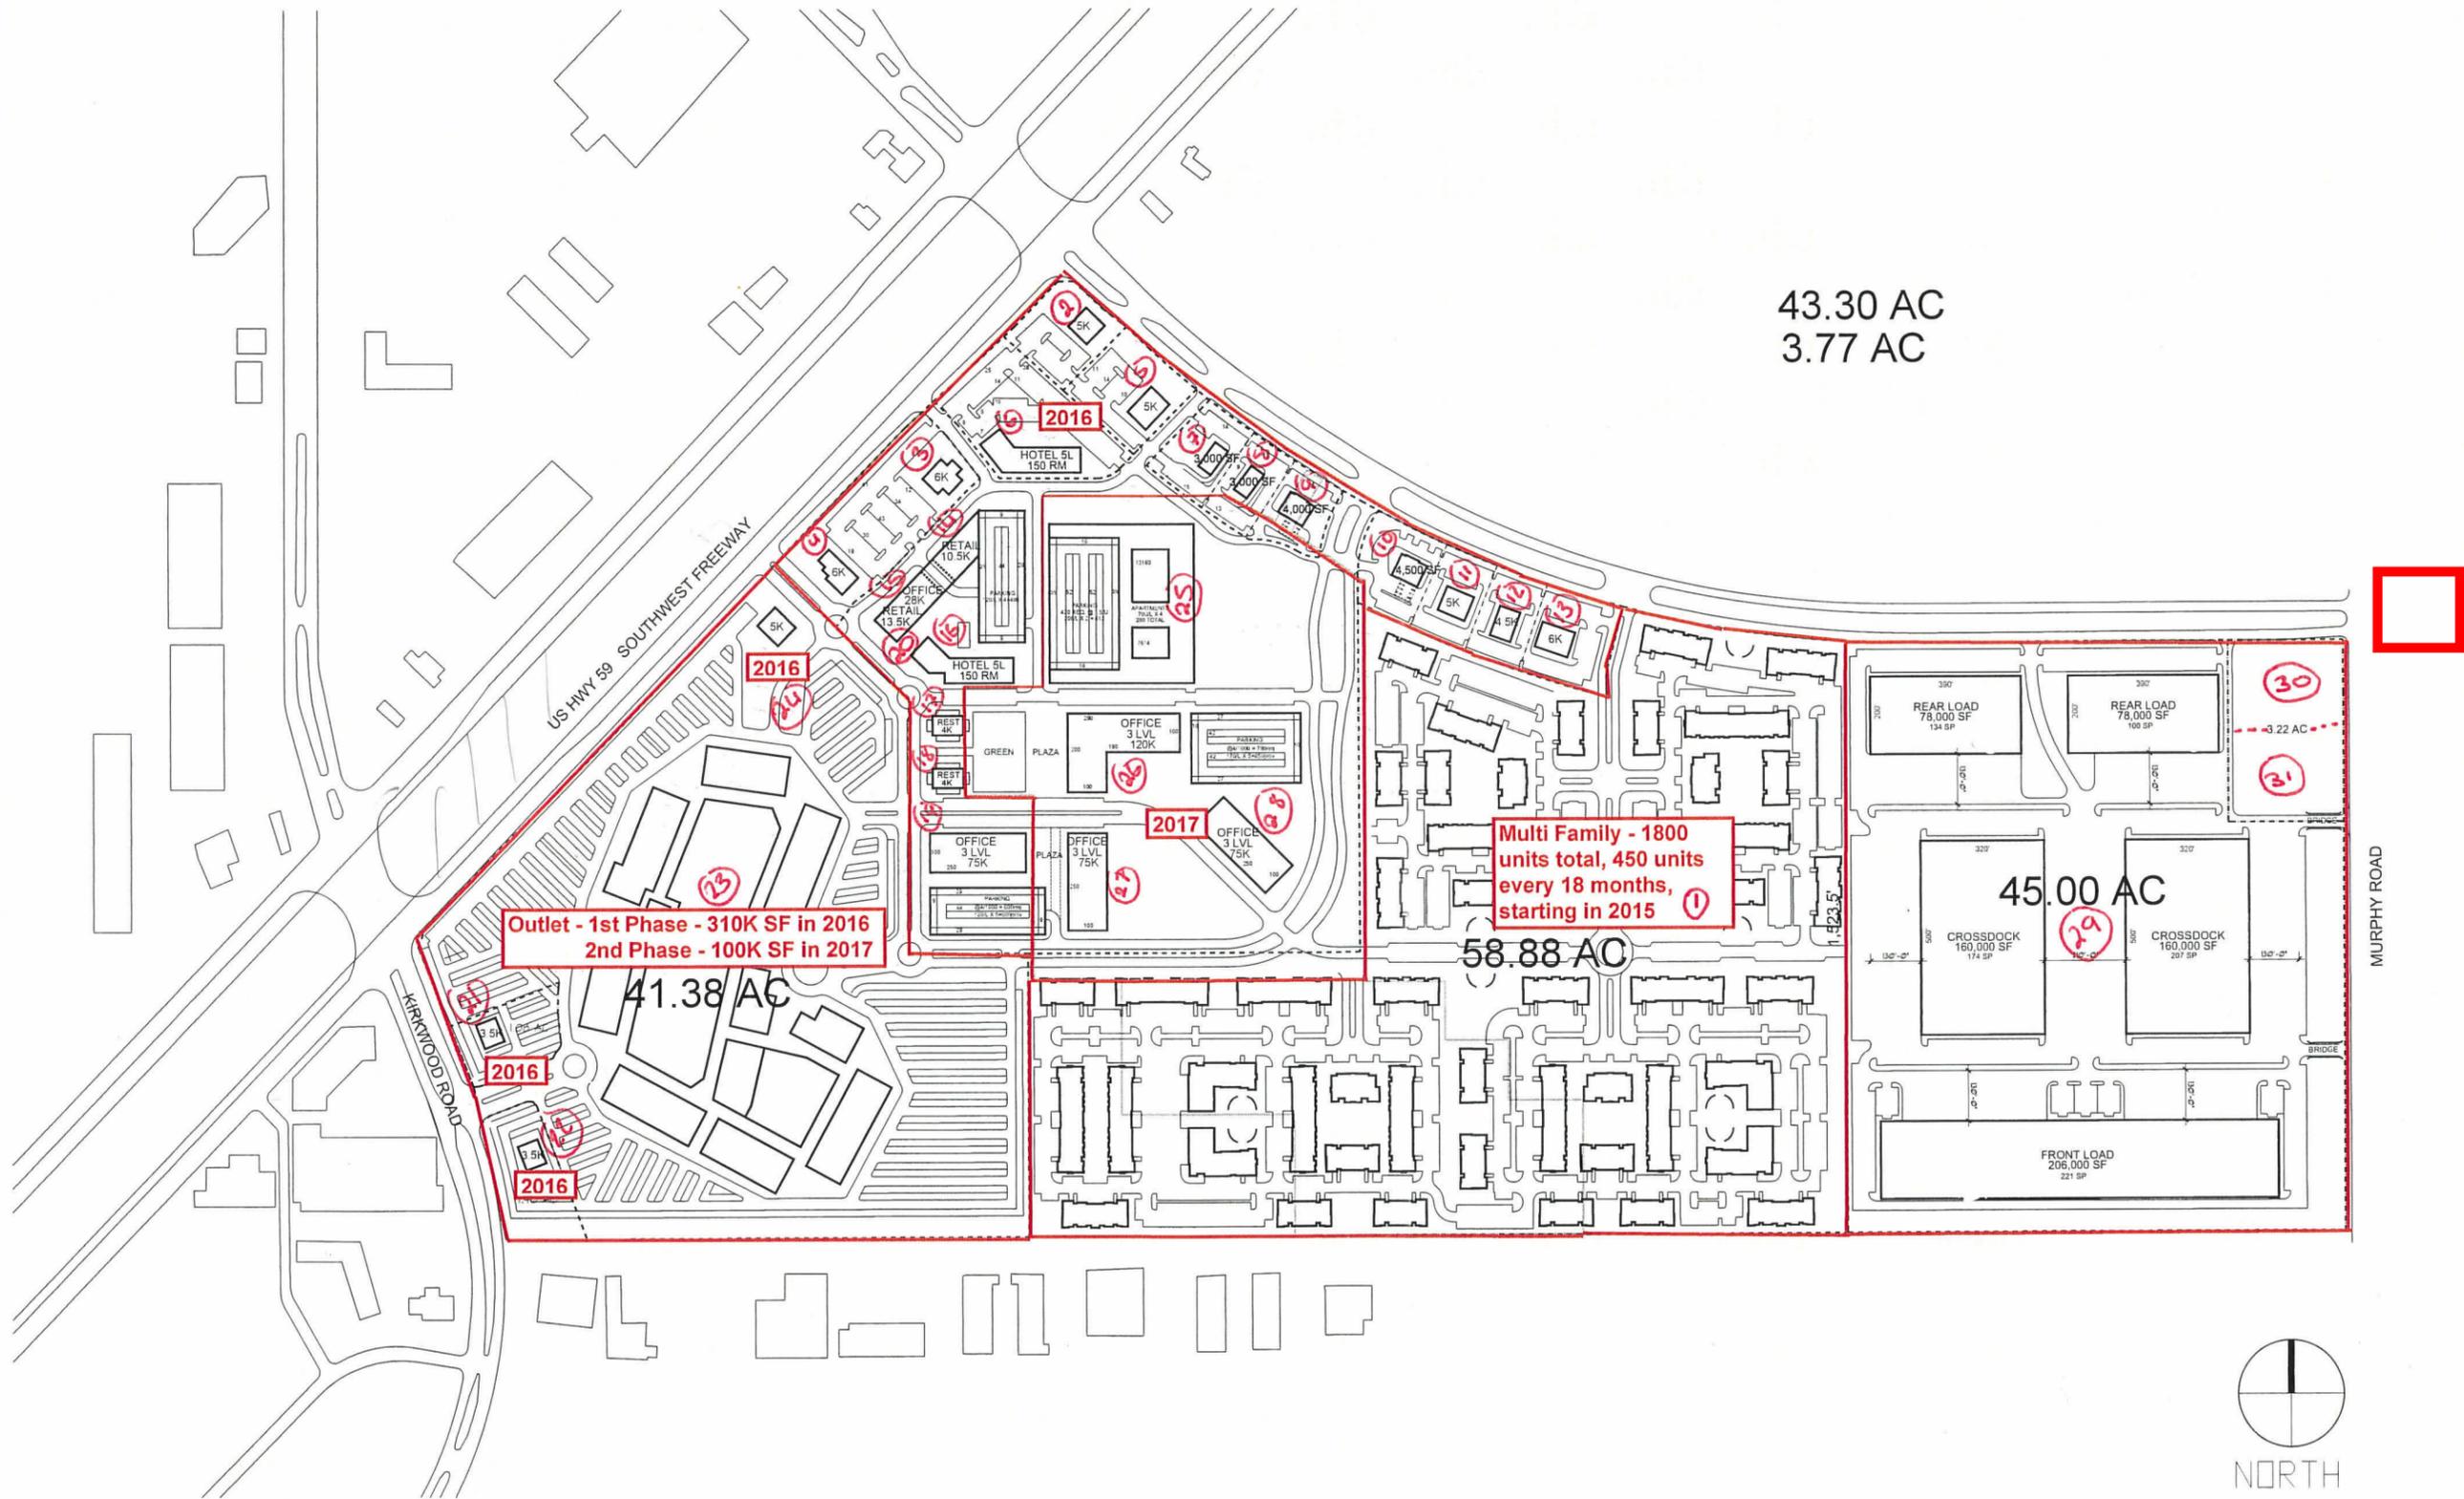

This study assumed that traffic signal timings at all signalized intersections within the study area will be updated as needed. Several roadway recommendations listed above may require right-of-way acquisitions along adjacent properties. These roadway improvements will require coordination between the developer, City of Stafford, TxDOT, and impacted business owners.

Several roadway improvements along Murphy Road within the study area were recommended as part of the FM 1092 Access Management Study dated December 2013. Refer to the Proposed Area Conditions Section of this report for a list of these roadway improvements. These recommendations include geometric and traffic signal improvements along the eastbound and westbound approaches of West Airport Boulevard, Greenbriar Drive, and Cash Road at Murphy Road. These proposed recommendations do not take into account the traffic generated by this proposed development, and therefore, should be updated as described in the list of recommendations above.

Several intersection movements will operate at unacceptable levels with and without the proposed development. Mitigation measures to address these deficiencies were not established in this study. This study provides mitigation measures to improve the operation of movements that will be reduced to unacceptable levels upon the construction of this proposed development.

FEE PROPOSAL

Charles Russell, PE
City Engineer/Assistant Director of Municipal Services
City of Stafford
2610 South Main
Stafford, Texas 77477

Re: Engineering Services for the
West Airport @ FM 1092 Intersection Improvements
LJA Fee Proposal No. 14-08244

Dear Mr. Russell:

LJA Engineering, Inc. (LJA) is pleased to present this fee proposal to provide comprehensive engineering services on the referenced project. Our work for this project will be completed under our current on-call agreement with the City dated November 13, 2008 and comply with the updated rate schedule approved by council on November 20, 2013.

We understand the City will be pursuing funding through the current HGAC 2015 TIP Call for Projects application process due December 15, 2014. The project generally consists of improving the intersection by:

- adding an eastbound left-turn lane, extending the west bound left-turn lane and improving signal timing
- adding an east bound right-turn only lane
- improving the south bound turning radius
- installing crosswalks and wheelchair ramps

Our conceptual construction cost estimate is approximately \$1,230,000.00 including 15% contingencies. This project will require an expansion of the existing bridge to accommodate the number of traffic lanes and sidewalks proposed.

Scope of Services and Associated Fee

Route and Design Study (Preliminary Layout)	\$ 4,100.00
Roadway Design Controls	\$ 18,000.00
Drainage Design	\$ 6,600.00
Signing, Pavement Markings and Signalization	\$ 28,600.00
Miscellaneous Roadway Items	\$ 17,300.00
Design Project Management	\$ 6,500.00
Bridge Design	\$ 84,000.00
Hydraulic Modeling	\$ 6,100.00
Construction Engineering (RFI's)	\$ 13,200.00
Sub-total	\$184,400.00

Geotechnical Investigation (2-80' bores, TxDOT stds)	\$ 14,500.00
Project Surveying	\$ 13,500.00
Environmental Study	\$ 21,200.00
Non-Salary Expenses	\$ 600.00
Sub-total	\$ 49,800.00

TOTAL FEE **\$234,200.00**

The geotechnical investigation will be provided by Terracon Consultants, Inc. as approved by the City. They will be a sub-consultant to LJA and the fee presented above includes a 10% mark-up pursuant to LJA policy for invoicing sub-consulting fees through LJA.

COMPENSATION

Based upon the Scope of Work listed above, LJA proposes to provide the items described above for a LUMP SUM price of \$234,200.00 including reimbursable cost. The City will be invoiced on a monthly based on the percentage of each task completed. Any directive by the City not included in the work items above will be billed on a time and material basis per the approved rate schedule.

PROJECT SCHEDULE

LJA proposes to provide the items necessary to meet the HGAC 2015 TIP "Call for Projects" application process due December 15, 2014 being prepared by the City. LJA proposes to provide the PS&E documents; from the date authorization is received as follows:

- | | |
|--|---------------|
| • Concept design through 30% submittal plans | 9 months |
| • 60% plan submittal | 3 months |
| • 90% plan submittal | 3 months |
| • 100% plan submittal to letting | 4 months |
|
Total Concept Design to PS&E for letting |
19 months |

ASSUMPTIONS

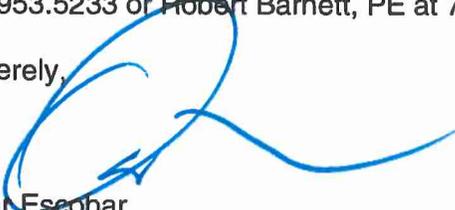

LJA made the following assumptions in the preparation of this proposal and fee estimate. Should any of these assumptions not be correct, LJA will negotiate an additional fee with the City of Stafford as necessary.

- LJA is not responsible for completing the TIP application to HGAC but will assist as design items are available.
- LJA has assumed existing plans for the roadways and utilities are available and Sub-surface Utility Engineering will not be required.
- Minor utility adjustment plans will be provided by LJA; any major utility adjustments will be provided by others or considered "extra work" if provided by LJA.

If this proposal meets with your approval, your signature below will be sufficient authorization to commence the stated work.

We appreciate the opportunity to submit this proposal, and look forward to working with you on completion of this project. If you have any questions please feel free to call me at any time at 713.953.5233 or Robert Barnett, PE at 713.953.5248.

Sincerely,

Omar Escobar
Director of Project Development

Robert Barnett, PE
Senior Project Manager

Cristin,

Attached are the following

1. Schedules revised as we discussed on Friday (to add a Preliminary Design meeting and move the DCC into the fall).
2. The estimates with the amounts copied over into the summary sheets in exact TxDOT Function Codes (previously broken down by more common task names).
3. Scope of Services for each intersection listed in the same order as shown on the cost estimates.

We are still working on the construction cost estimates.

Regards

Cristin,

Attached are the project schedules for FM 1092 at West Airport and FM 1092 at Avenue E. These were revised to show PS&E preparation starting after the approval of the CE and right of way acquisition complete before the project is bid.

I have also attached the engineering cost estimates with hydraulic modeling added to the West Airport project.

That added about \$6000. I reduced another task by \$2,000 for a net difference of approximately \$4,000.

We will work on preliminary construction cost estimates.

Regards,

Cristin,

I discussed the timing of the CE with other project tasks this morning with Jeff Anderson, the environmental group manager at Klotz.

His interpretation of the interaction is as follows:

- TxDOT prefers the environmental document be approved before they spend time reviewing any PS&E work. There are exceptions and the local district will sometimes start reviewing projects that appear to be a sure thing to move forward.
- We will place a time slot of 6 months for preparation and approval of the CE. He thinks we can beat this time but it is a safe estimate.
- It is dangerous to acquire (or even negotiate on) right of way parcels before approval of the environmental document. So we will show right of way acquisition after approval of the CE.
- I think the “cleared ROW” term ties to the bid process. TxDOT does not want to bid a project before all right of way has been acquired or has gone far enough in the condemnation process that the state has the right of entry to construct on the property.

I will proceed with revising the schedules based on this information.

Bob,

As discussed, please update the schedules for both the Avenue E project and West Airport for the TxDOT requirement that environmental documents are submitted before TxDOT will begin reviewing the projects (30%, 60%, 95%). Also, please verify if the ROW must be cleared before the CE can be submitted.

Charles will be discussing the design estimates with the Mayor. Even though the estimate won't change much, send me the updated design estimate for W Airport for the hydraulic study when that is complete. What is your rough cost estimate for construction?

In addition, we have another project we would like to consider for the budget next year. We need a design cost estimate and construction cost estimate to install sidewalks along Stafford/Staffordshire Rd from Cravens to Fifth St on the east side of the roadway. The preference is for 5' sidewalks throughout but 6' sidewalks from Fifth St to Scanlin because of the location to the school. There will be some tight areas just north of First St to US 90A because of the fences installed there that may require 4' sidewalks but only if necessary. There may also be tight ROW areas from Frank Ln to Cravens Rd. Since we don't want to install sidewalks on both sides of the roadway but do want to be continuous, the east side of the roadway is preferred because it looks as though we have the most ROW. Sidewalks can also be placed on the west side of the road if needed but it would be best if the switch happens at an intersection with a crosswalk. If you want a closer look at the city limits, access our GIS site here: <http://staffordpw.com/interactive-maps.html>

Please call if you need clarification. Thank you!

Charles

Here is where we are on our estimates

Bob thought that the bridge widening at West Airport will match existing and minimal H&H will be required and could be included in the design fee. Thus, we have not included any "impact" study.

Construction Phase Services are limited any shop drawings and assist with RFIs, it does not include project inspection and administration

I am out next week on vacation so we wanted to get you something to look at.

Please call Bob directly at the numbers below if you have any questions.

Enjoy Memorial Day

Thanks Omar

Subject: Stafford Intersection Estimates

Attached are the schedules and cost proposal.

The ROW surveying cost is based on \$3500 per parcel, a typical cost number provided by Keith Monroe.

The surveying cost is an estimate by me.

I am waiting on a final cost proposal from LJA Surveyors, but if we have to turn something in asap, this is a good estimate.

**FM 1092 at West Airport
Intersection Design
Scope of Services**

1. Prepare preliminary intersection layout from available aerial photography to define the roadway footprint for the environmental study, design surveys and right of way surveys.
2. Prepare environmental document, assumed to be a CE from currently available information, in accordance with the attached environmental scope of services.
3. Perform design field surveys in accordance with TxDOT standards of practice.
4. Perform right of way surveys and prepare right of way plans and parcel descriptions in accordance with TxDOT standard practices.
5. Prepare roadway plans for widening West Airport in accordance with the preliminary plan in the FM 1092 Access Management Study and the preliminary intersection layout prepared in Item 1 above.
6. Prepare storm sewer adjustment plans to accommodate widened pavement.
7. Prepare Traffic signal plans and specifications.
8. Prepare signing and pavement marking plans for the intersection.
9. Prepare Traffic Control Plan for widening existing pavement at locations shown on the plans.
10. Prepare miscellaneous drawings including title sheet, index of sheets, storm water pollution prevention plan, summary of quantities, general notes, list of specifications,, construction cost estimate and construction contract time determination.
11. Prepare plans for widening of the West airport bridges to include filling in the existing open median and an outside widening to the south side of the eastbound lanes.
12. Perform Hydraulics calculations to evaluate the of impact of bridge widening on the existing drainage ditch
13. Provide limited construction phase engineering services to include attendance at Monthly progress meetings, checking of required shop drawings and submittals, assistance with requests for information and assistance with change orders if required.

⊗ = connect sidewalks to signal

EXHIBIT D Development Plan

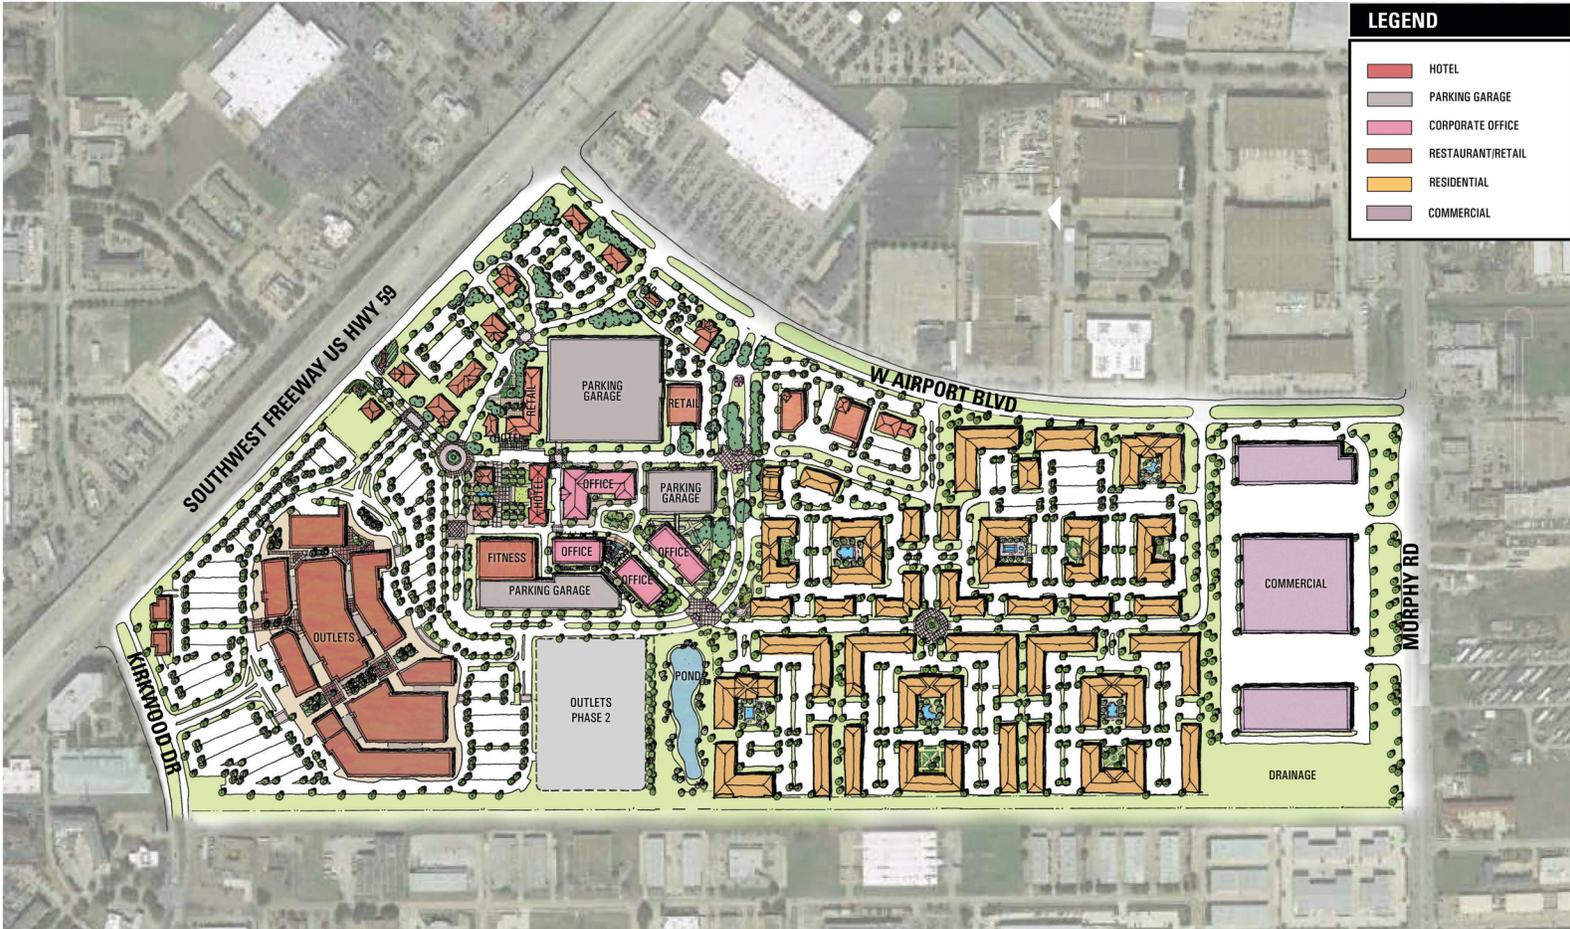

EXHIBIT D-2 Construction Schedule

FM 1092 (Murphy Rd) at West Airport Blvd Intersection Upgrades

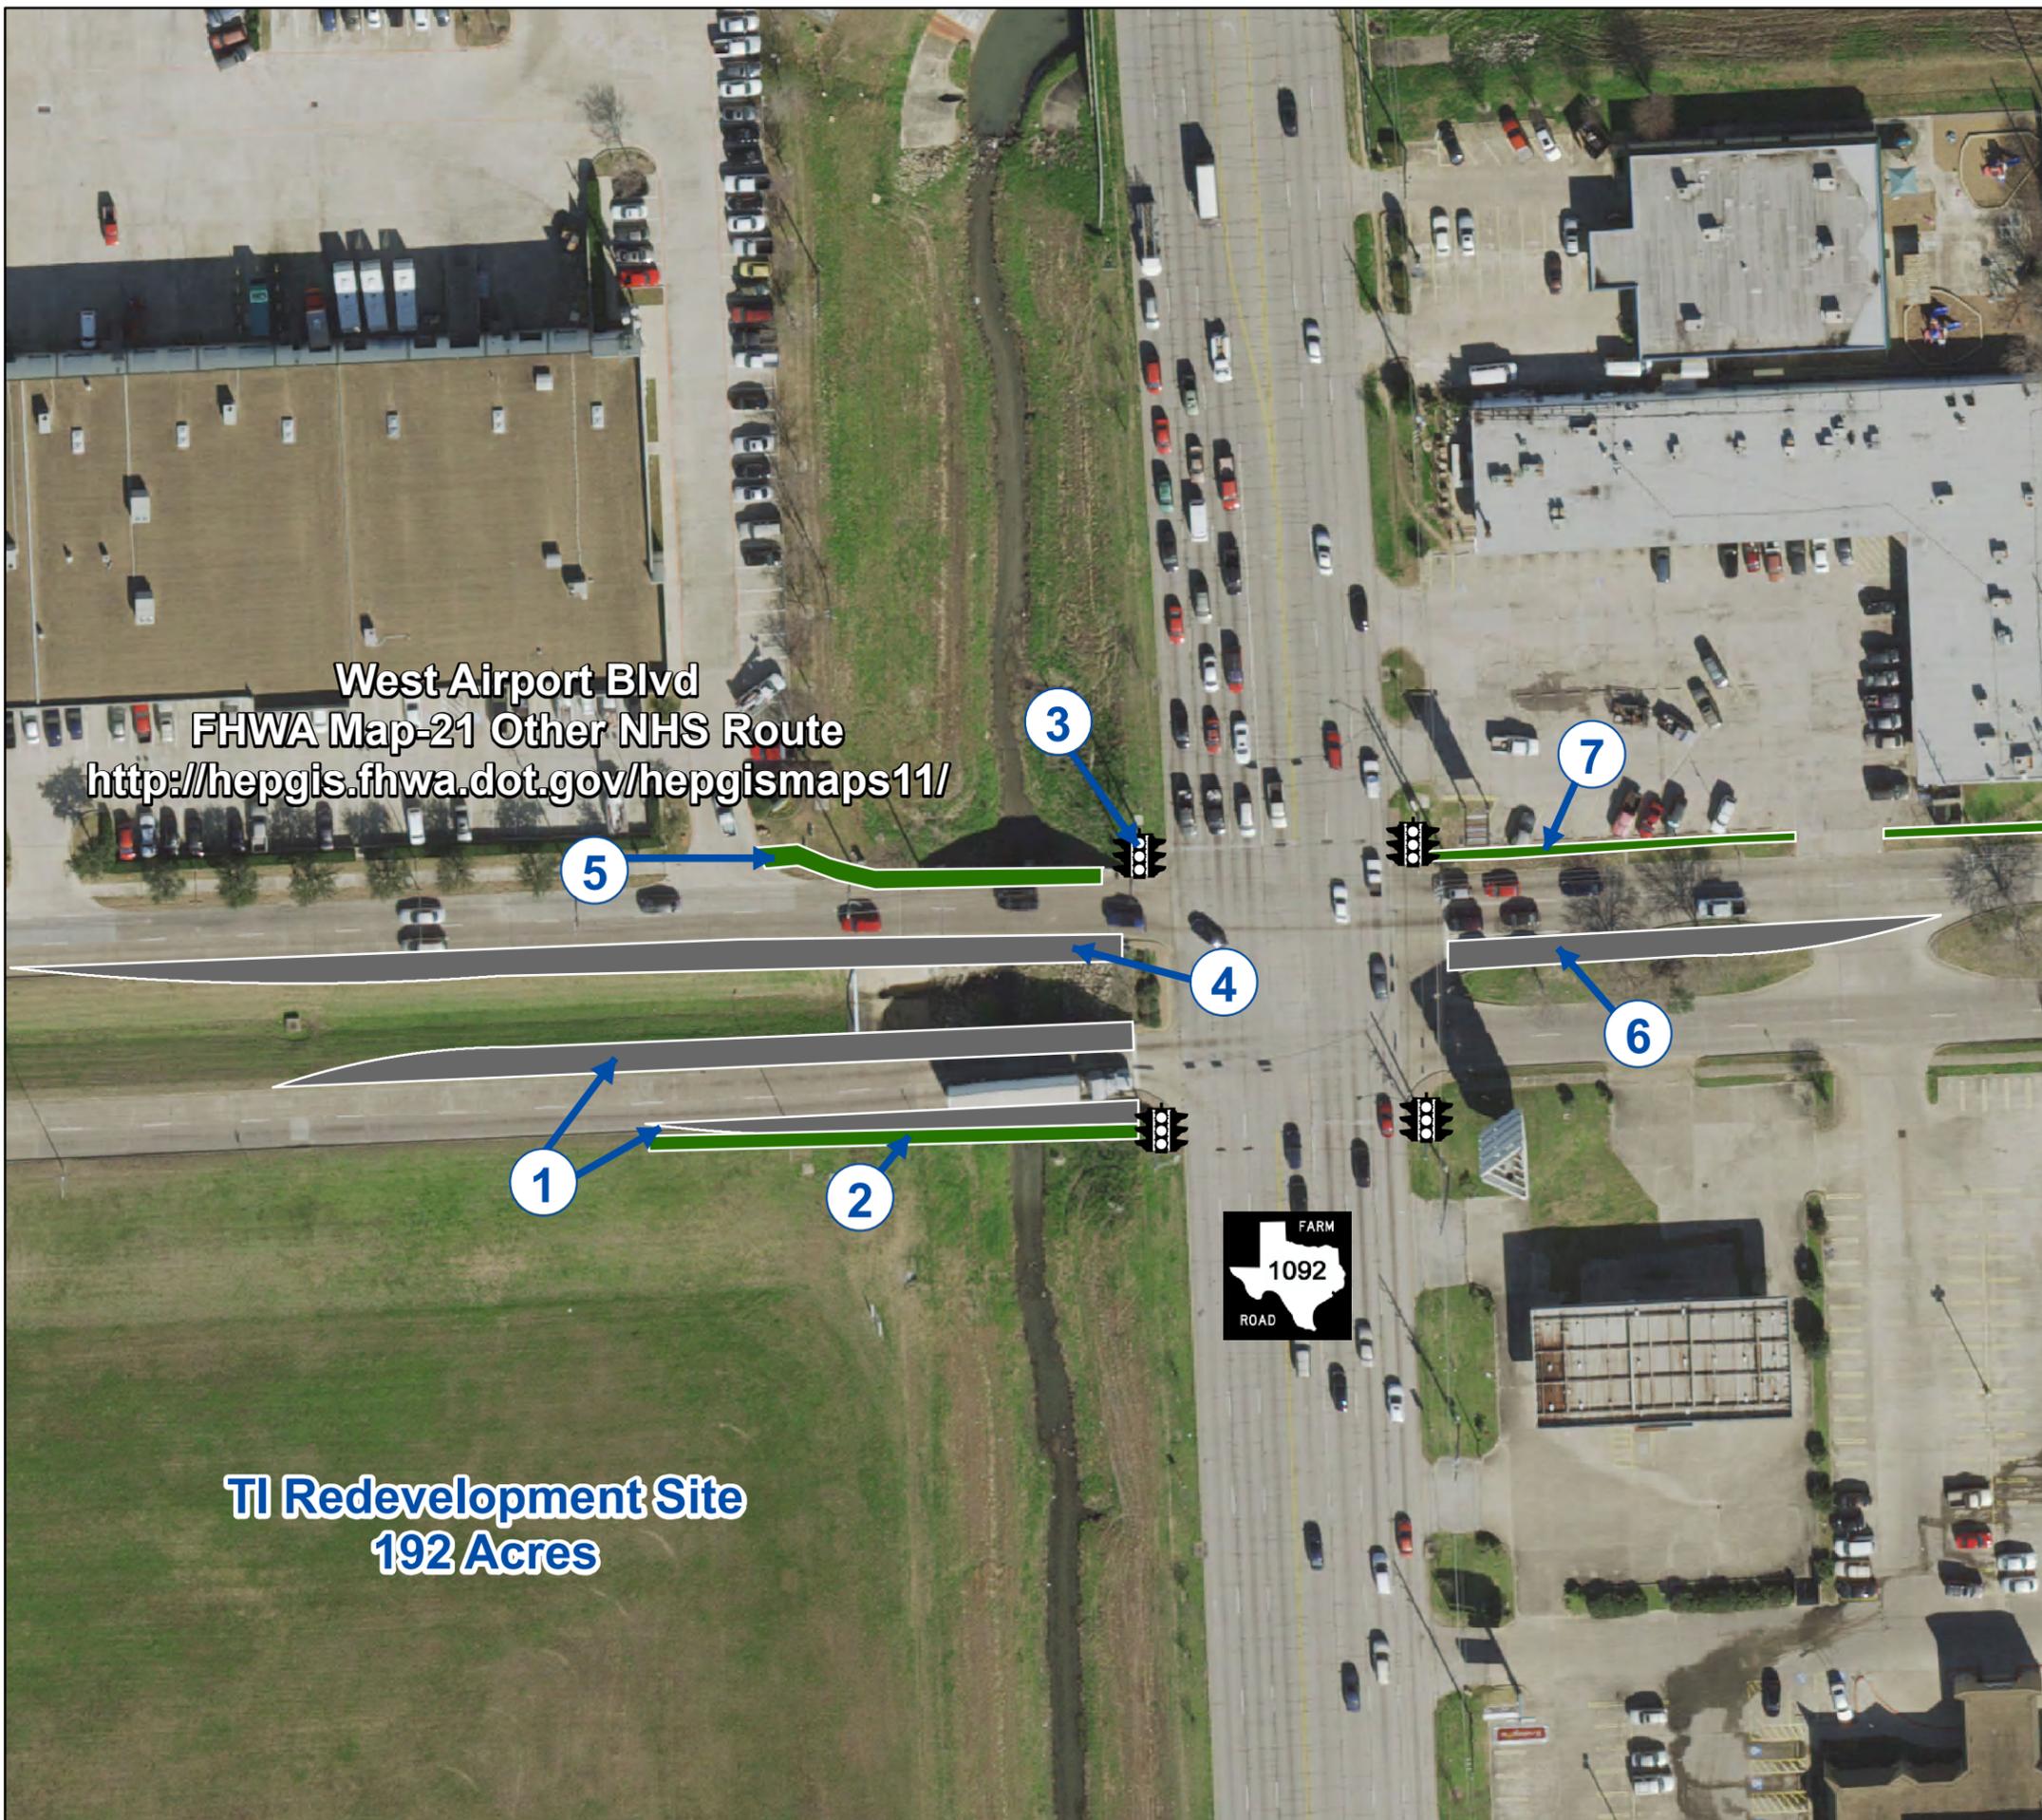

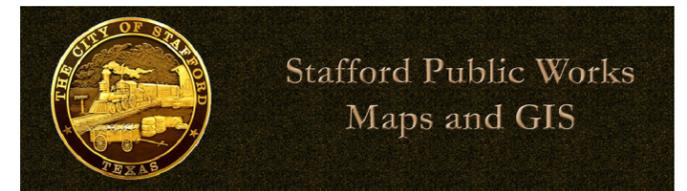

-  Turn Lane
-  Sidewalk
-  Traffic Signal

- 1: Add Eastbound Left and Right Turn Lanes
- 2: 6 Foot Sidewalk, Connect to Future Development; ROW Dedication with Development Agreement
- 3: Upgrade Signals From Span Wire to Traffic Pole and Arm Configuration, Improve Signal Timing
- 4: Add Westbound Through-Lane
- 5: Extend Existing Sidewalk from 4 Foot to 6 Foot
- 6: Extend Westbound Left Turn Lane
- 7: Connect Existing Sidewalks to Intersection, Install Wheelchair Ramps, Crosswalks with Pavers and Audible Pedestrian Countdowns
