

## Overview of Crash Analysis

The Crash Analysis looked at:

- Area crash density analyses:
  - All crashes
  - Ped/bike crashes
  - Fatalities/severe injuries
- General statistics of crashes in study area/along corridor
  - Fatalities
  - Incapacitating injuries
  - Ped involved crashes
  - Bike involved crashes
- Corridor crash rate
  - Conducted for the entire corridor
  - Also conducted for key segments – longer segments are better
- Intersection crash rates for all intersections where count data is available.

The years 2018-2022 were the years used for this analysis (January 2024).
